Communication Systems and Information Technology Ming Ma, 2011-06-21 This volume includes extended and revised versions of a set of selected papers from the International Conference on Electric and Electronics EEIC 2011 held on June 20-22, 2011 which is jointly organized by Nanchang University Springer and IEEE IAS Nanchang Chapter. The objective of EEIC 2011 Volume 4 is to provide a major interdisciplinary forum for the presentation of new approaches from Communication Systems and Information Technology to foster integration of the latest developments in scientific research. 137 related topic papers were selected into this volume. All the papers were reviewed by 2 program committee members and selected by the volume editor Prof Ming Ma. We hope every participant can have a good opportunity to exchange their research ideas and results and to discuss the state of the art in the areas of the Communication Systems and Information Technology.

Build Your Own AF Valve Amplifiers Rainer Zur Linde, 1995 To many people the thermionic valve or electron tube is history. However, whether it is nostalgia interest in the technical parameters, the appeal of a gleaming amplifier chassis with softly glowing valves, respect for the technical know-how of an earlier generation or perhaps the firm conviction that the sound of a valve cannot be bettered, it is a fact that the valve is making a comeback. The book contains apart from construction projects for preamplifiers, power amplifiers and two amplifiers for musical instruments, information on the operation of electron tubes while the first chapter gives a short history of the valve.

Designing Audio Circuits Robert Sontheimer, 1998 How does speech, music or indeed any sound get from the record, the CD or the cassette tape to the loudspeaker? This is a question that many people keep on asking and to which this book endeavours to give a comprehensible answer. Understanding the background of the process is a first requirement which is why the author, in the description of single components, makes clear what exactly happens in the component. An understanding is also engendered of phenomena such as noise, hum, distortion and others as well as standards such as the decibel and the RIAA characteristic. Designing circuits is practically impossible without an understanding of the various networks involved in the conversion of the input sound to the sound emanating from a loudspeaker. To this end, the author describes four important basic circuits using an operational amplifier, a component without which modern audio circuits can no longer be imagined. Variants of these four circuits return in many of the other circuits contained in this book. Building circuits including ancillary and special ones form the practical parts of this book. These circuits can be applied in audio equipment as well as with certain musical instruments. There are preamplifiers, filters, output stages, power supplies, companders, mixer panels, level meters, bandwidth limiters, headphone amplifiers, playback stages as well as tips on construction and faultfinding.
