Rahman, Mohammad Saleh Zarepour, 2021-02-09 This volume is a collection of essays in honour of Professor Mohammad Ardeshtir It examines topics which in one way or another are connected to the various aspects of his multidisciplinary research interests Based on this criterion the book is divided into three general categories The first category includes papers

on non classical logics including intuitionistic logic constructive logic basic logic and substructural logic The second category is made up of papers discussing issues in the contemporary philosophy of mathematics and logic The third category contains papers on Avicenna s logic and philosophy Mohammad Ardeshir is a full professor of mathematical logic at the Department of Mathematical Sciences Sharif University of Technology Tehran Iran where he has taught generations of students for around a quarter century Mohammad Ardeshir is known in the first place for his prominent works in basic logic and constructive mathematics His areas of interest are however much broader and include topics in intuitionistic philosophy of mathematics and Arabic philosophy of logic and mathematics In addition to numerous research articles in leading international journals Ardeshir is the author of a highly praised Persian textbook in mathematical logic Partly through his writings and translations the school of mathematical intuitionism was introduced to the Iranian academic community

Dick de Jongh on Intuitionistic and Provability Logics Nick Bezhanishvili, Rosalie Iemhoff, Fan Yang, 2024-07-25 This book is dedicated to Dick de Jongh s contributions to the theory of intuitionistic and provability logics Consisting of 13 chapters written by leading experts this book discusses de Jongh s original contributions and consequent developments that have helped to shape these fields The book begins with an autobiographic note by Dick de Jongh which discusses the main themes of his work and places the other contributions in context The next four chapters explore the De Jongh Sambin fixed point theorem and other contributions to provability and interpretability logics The following four chapters focus on modal intuitionistic and intuitionistic modal logics They discuss independence of formulas unification and de Jongh formulas in intuitionistic and modal logics Then there follow two chapters on the other two areas to which Dick de Jongh made important contributions the theory of well partial orders and formal learning theory The second to last chapter on Origami Geometry can be seen as representing the Master of Logic program of the Institute for Logic Language and Computation ILLC in which de Jongh invested a lot of energy The book ends with a complete bibliography of Dick de Jongh in the last chapter This volume provides a vital overview and continuation of de Jongh s prolific work in the theory of intuitionistic and provability logics

Computability In Context: Computation And Logic In The Real World S Barry Cooper, Andrea Sorbi, 2011-02-25 Computability has played a crucial role in mathematics and computer science leading to the discovery understanding and classification of decidable undecidable problems paving the way for the modern computer era and affecting deeply our view of the world Recent new paradigms of computation based on biological and physical models address in a radically new way questions of efficiency and challenge assumptions about the so called Turing barrier This volume addresses various aspects of the ways computability and theoretical computer science enable scientists and philosophers to deal with mathematical and real world issues covering problems related to logic mathematics physical processes real computation and learning theory At the same time it will focus on different ways in which computability emerges from the real world and how this affects our way of thinking about everyday computational issues a

Instability in Models Connected with Fluid Flows I Claude

Bardos, Andrei V. Fursikov, 2007-12-20 In this authoritative and comprehensive volume Claude Bardos and Andrei Fursikov have drawn together an impressive array of international contributors to present important recent results and perspectives in this area The main subjects that appear here relate largely to mathematical aspects of the theory but some novel schemes used in applied mathematics are also presented Various topics from control theory including Navier Stokes equations are covered

Introduction to Formal Philosophy Sven Ove Hansson, Vincent F. Hendricks, 2018-10-24 This Undergraduate Textbook introduces key methods and examines the major areas of philosophy in which formal methods play pivotal roles Coverage begins with a thorough introduction to formalization and to the advantages and pitfalls of formal methods in philosophy The ensuing chapters show how to use formal methods in a wide range of areas Throughout the contributors clarify the relationships and interdependencies between formal and informal notions and constructions Their main focus is to show how formal treatments of philosophical problems may help us understand them better Formal methods can be used to solve problems but also to express new philosophical problems that would never have seen the light of day without the expressive power of the formal apparatus Formal philosophy merges work in different areas of philosophy as well as logic mathematics computer science linguistics physics psychology biology economics political theory and sociology This title offers an accessible introduction to this new interdisciplinary research area to a wide academic audience

Sobolev Spaces in Mathematics II Vladimir Maz'ya, 2008-11-26 Sobolev spaces become the established and universal language of partial differential equations and mathematical analysis Among a huge variety of problems where Sobolev spaces are used the following important topics are the focus of this volume boundary value problems in domains with singularities higher order partial differential equations local polynomial approximations inequalities in Sobolev Lorentz spaces function spaces in cellular domains the spectrum of a Schrodinger operator with negative potential and other spectral problems criteria for the complete integration of systems of differential equations with applications to differential geometry some aspects of differential forms on Riemannian manifolds related to Sobolev inequalities Brownian motion on a Cartan Hadamard manifold etc Two short biographical articles on the works of Sobolev in the 1930s and the foundation of Akademgorodok in Siberia supplied with unique archive photos of S Sobolev are included

Sobolev Spaces in Mathematics I Vladimir Maz'ya, 2008-12-02 This volume marks the centenary of the birth of the outstanding mathematician of the 20th century Sergey Sobolev It includes new results on the latest topics of the theory of Sobolev spaces partial differential equations analysis and mathematical physics

Alasdair Urquhart on

Nonclassical and Algebraic Logic and Complexity of Proofs Ivo Düntsch, Edwin Mares, 2021-09-24 This book is dedicated to the work of Alasdair Urquhart The book starts out with an introduction to and an overview of Urquhart's work and an autobiographical essay by Urquhart This introductory section is followed by papers on algebraic logic and lattice theory papers on the complexity of proofs and papers on philosophical logic and history of logic The final section of the book contains a response to the papers by Urquhart Alasdair Urquhart has made extremely important contributions to a variety of fields in logic He produced some of the earliest work on the semantics of relevant logic He provided the undecidability of the logics R of relevant implication and E of relevant entailment as well as some of their close neighbors He proved that interpolation fails in some of those systems Urquhart has done very important work in complexity theory both about the complexity of proofs in classical and some nonclassical logics In pure algebra he has produced a representation theorem for lattices and some rather beautiful duality theorems In addition he has done important work in the history of logic especially on Bertrand Russell including editing Volume four of Russell's Collected Papers *New Computational Paradigms* S.B. Cooper, Benedikt Löwe, Andrea Sorbi, 2007-11-28 This superb exposition of a complex subject examines new developments in the theory and practice of computation from a mathematical perspective with topics ranging from classical computability to complexity from biocomputing to quantum computing This book is suitable for researchers and graduate students in mathematics philosophy and computer science with a special interest in logic and foundational issues Most useful to graduate students are the survey papers on computable analysis and biological computing Logicians and theoretical physicists will also benefit from this book **Logical Approaches to Computational Barriers** Arnold Beckmann, Ulrich Berger, Benedikt Löwe, John V. Tucker, 2006-06-29 This book constitutes the refereed proceedings of the Second International Conference on Computability in Europe CiE 2006 held in Swansea UK June July 2006 The book presents 31 revised full papers together with 30 invited papers including papers corresponding to 8 plenary talks and 6 special sessions on proofs and computation computable analysis challenges in complexity foundations of programming mathematical models of computers and hypercomputers and Gödel's centenary Gödel's legacy for computability Johan van Benthem on Logic and Information Dynamics Alexandru Baltag, Sonja Smets, 2014-08-27 This book illustrates the program of Logical Informational Dynamics Rational agents exploit the information available in the world in delicate ways adopt a wide range of epistemic attitudes and in that process constantly change the world itself Logical Informational Dynamics is about logical systems putting such activities at center stage focusing on the events by which we acquire information and change attitudes Its contributions show many current logics of information and change at work often in multi agent settings where social behavior is essential and often stressing Johan van Benthem's pioneering work in establishing this program However this is not a Festschrift but a rich tapestry for a field with a wealth of strands of its own The reader will see the state of the art in such topics as information update belief change preference learning over time and strategic interaction in games Moreover

no tight boundary has been enforced and some chapters add more general mathematical or philosophical foundations or links to current trends in computer science The theme of this book lies at the interface of many disciplines Logic is the main methodology but the various chapters cross easily between mathematics computer science philosophy linguistics cognitive and social sciences while also ranging from pure theory to empirical work Accordingly the authors of this book represent a wide variety of original thinkers from different research communities And their interconnected themes challenge at the same time how we think of logic philosophy and computation Thus very much in line with van Benthem s work over many decades the volume shows how all these disciplines form a natural unity in the perspective of dynamic logicians broadly conceived exploring their new themes today And at the same time in doing so it offers a broader conception of logic with a certain grandeur moving its horizons beyond the traditional study of consequence relations

Studies in Logic

Madhabendra Nath Mitra,Mihir Kumar Chakraborty,Sundar Sarukkai,2023-05-11 Ten essays of this book two of which are written in Sanskrit range from modern logic to classical Indian theories of inference Classical Indian philosophy comprising Pracina and Navya Nyaya Sankhya Buddhist and Jaina logical

and philosophical standpoints are discussed in most modern technical terms of western philosophy often with the aid of terminologies of modern logic Similarly western ideas propounded by the ancient Greek philosophers like Aristotle as well as contemporary philosophers such as Frege Russell Srawson Kripke and many others are placed against the backdrop of classical Indian philosophy The book will be immensely useful to those interested in stimulating meaningful dialogues between philosophical thinkings of India and the West The book will also be of interest to those who aim at broadening the horizon of logic and philosophy
