Mathematical Tables And Formulas:

Mathematical Tables and Formulas Percey Franklyn Smith, William Raymond Longley, 1929 This collection of tables and formulas is intended primarily as a handbook for solving numerical problems in connection with the courses in mathematics of the freshman and sophomore years in colleges and technical schools It will also be useful to workers in fields requiring applications of calculus The numerical tables in this book are those which have been found by experience to be most useful in solving the problems which arise in connection with college courses in trigonometry analytic geometry calculus and mechanics The collection of formulas is intended to save time and relieve the burden on the memory without reducing problem work to mere substitution of numbers in equations Preface
