Advances in Mathematical Logic Toshiyasu Arai, Makoto Kikuchi, Satoru Kuroda, Mitsuhiro Okada, Teruyuki Yorioka, 2022-01-24 Gaisi Takeuti was one of the most brilliant genius and influential logicians of the 20th century He was a long time professor and professor emeritus of mathematics at the University of Illinois at Urbana Champaign USA before he passed away on May 10 2017 at the age of 91 Takeuti was one of the founders of Proof Theory a branch of mathematical logic that originated from Hilbert's program about the consistency of mathematics Based on Gentzen's pioneering works of proof theory in the 1930s he proposed a conjecture in 1953 concerning the essential nature of formal proofs of higher order logic now known as Takeuti's fundamental conjecture and of which he gave a partial positive solution His arguments on the conjecture and proof theory in general have had great influence on the later developments of mathematical logic philosophy of mathematics and applications of mathematical logic to theoretical computer science Takeuti's work ranged over the whole spectrum of mathematical logic including set theory computability theory Boolean valued analysis fuzzy logic bounded arithmetic and theoretical computer science He wrote many monographs and textbooks both in English and in Japanese and his monumental monograph Proof Theory published in 1975 has long been a standard reference of proof theory He had a wide range of interests covering virtually all areas of mathematics and extending to physics His publications include many Japanese books for students and general readers about mathematical logic mathematics in general and connections between mathematics and physics as well as many essays for Japanese science magazines This volume is a collection of papers based on the Symposium on Advances in Mathematical Logic 2018 The symposium was held September 18-20 2018 at Kobe University Japan and was dedicated to the memory of Professor Gaisi Takeuti

Challenging Mathematics In and Beyond the Classroom Edward J. Barbeau, Peter J. Taylor, 2009-04-21 In the mid 1980s the International Commission on Mathematical Instruction ICMI inaugurated a series of studies in mathematics education by commissioning one on the influence of technology and informatics on mathematics and its teaching These studies are designed to thoroughly explore topics of contemporary interest by gathering together a group of experts who prepare a Study Volume that provides a considered assessment of the current state and a guide to further developments Studies have embraced a range of issues some central such as the teaching of algebra some closely related such as the impact of history and psychology and some looking at mathematics education from a particular perspective such as cultural differences between East and West These studies have been commissioned at the rate of about one per year Once the ICMI

Executive decides on the topic one or two chairs are selected and then in consultation with them an International Program Committee IPC of about 12 experts is formed The IPC then meets and prepares a Discussion Document that sets forth the issues and invites interested parties to submit papers These papers are the basis for invitations to a Study Conference at which the various dimensions of the topic are explored and a book the Study Volume is sketched out The book is then put together in collaboration mainly using electronic communication The entire process typically takes about six years

A Contemporary Theory of Mathematics Education Research Tony Brown, 2020-10-05 This book by passes both psychology and sociology to present an original social theory centered on seeing mathematical learning by everyone as an intrinsic dimension of how mathematics develops as a field in support of human activity Here mathematics is defined by how we collectively talk about it Drawing on psychoanalytic theory the student is seen as participating in the renewal of mathematics through their contributions to our collective gaze on mathematics as the field responds to ever new demands As such learning takes a critical stance on the standard initiations into current practices often promoted by formal education In the field of mathematics education researchers have moved from psychology where individual students were seen as following natural paths of development through existing mathematical knowledge to socio cultural models predicated on students being initiated into the human world and understood through the reflective gazes this world has of itself such as those found in comparisons of student learning in different countries This book addresses the domain purpose and functioning of contemporary research in mathematics education and is an original contribution to this theme The book is aimed at a mathematics education research audience It continues a dialogue with existing publications seen widely as a cutting edge and will also be of interest to students and practitioners in the fields of qualitative research social theory and psychology
