**Mathematical Encounters and Pedagogical Detours** Boris Koichu, Rina Zazkis, 2021-02-04 This book explores the idea that mathematics educators and teachers are also problem solvers and learners and as such they constantly experience mathematical and pedagogical disturbances Accordingly many original tasks and learning activities are results of personal mathematical and pedagogical disturbances of their designers who then transpose these disturbances into learning opportunities for their students This learning transposition process is a cornerstone of mathematics teacher education as a lived developing enterprise Mathematical Encounters and Pedagogical Detours unfold the process and illustrate it by various examples The book engages readers in original tasks shares the results of task implementation and describes how these results inform the development of new tasks which often intertwine mathematics and pedagogy Most importantly the book includes a dialogue between the authors based on the stories of their own learning which triggers continuous exploration of

McKnight, 2012-07-06 Inequality for All makes an important contribution to current debates about economic inequalities and the growing achievement gap particularly in mathematics and science education The authors argue that the greatest source of variation in opportunity to learn is not between local communities or even schools but between classrooms They zero in on one of the core elements of schooling coverage of subject matter content and examine how such opportunities are distributed across the millions of school children in the United States Drawing on data from the third TIMMS international study of curriculum and achievement as well as a six district study of over 500 schools across the United States they point to Common Core State
