V.A. Steklova, 1964 Basic Operator Theory Israel Gohberg, Seymour Goldberg, 2013-12-01 rii application of linear operators on a Hilbert space We begin with a chapter on the geometry of Hilbert space and then proceed to the spectral theory of compact self adjoint operators operational calculus is next presented as a natural outgrowth of the spectral theory The second part of the text concentrates on Banach spaces and linear operators acting on these spaces It includes for example the three basic principles of linear analysis and the Riesz Fredholm theory of compact operators Both parts contain plenty of applications All chapters deal exclusively with linear problems except for the last chapter which is an introduction to the theory of nonlinear operators In addition to the standard topics in functional analysis we have presented relatively recent results which appear for example in Chapter VII In general in writing this book the authors were strongly influenced by recent developments in operator theory which affected the choice of topics proofs and exercises One of the main features of this book is the large number of new exercises chosen to expand the reader's comprehension of the material and to train him or her in the use of it In the beginning portion of the book we offer a large selection of computational exercises later the proportion of exercises dealing with theoretical questions increases We have however omitted exercises after Chapters V VII and XII due to the specialized nature of the subject matter Scientific Information Notes, 1963 **Conformal Mapping on Riemann Surfaces** Harvey Cohn, 2014-05-05 Lucid insightful exploration reviews complex analysis introduces Riemann manifold shows how to define real functions on manifolds and more Perfect for classroom use or independent study 344 exercises 1967 edition An Introduction to Fourier Series and Integrals Robert T. Seeley, 2014-02-20 A compact sophomore to senior level guide Dr Seeley's text introduces Fourier series in the way that Joseph Fourier himself used them as solutions of the heat equation in a disk Emphasizing the relationship between physics

and mathematics Dr Seeley focuses on results of greatest significance to modern readers Starting with a physical problem Dr Seeley sets up and analyzes the mathematical modes establishes the principal properties and then proceeds to apply these results and methods to new situations The chapter on Fourier transforms derives analogs of the results obtained for Fourier series which the author applies to the analysis of a problem of heat conduction Numerous computational and theoretical problems appear throughout the text Playing with Infinity Rózsa Péter,2012-04-04 Popular account ranges from counting to mathematical logic and covers many concepts related to infinity graphic representation of functions pairings other combinations prime numbers logarithms circular functions more 216 illustrations **Abstract Algebra and Solution by Radicals** John Edward Maxfield,Margaret W. Maxfield,2010-03-01 The American Mathematical Monthly recommended this advanced undergraduate level text for teacher education It starts with groups rings fields and polynomials and advances to Galois theory radicals and roots of unity and solution by radicals Numerous examples illustrations commentaries and exercises enhance the text along with 13 appendices 1971 edition Introduction to Vector and Tensor Analysis Robert C. Wrede,2013-01-30 Examines general Cartesian coordinates the cross product Einstein s special theory of relativity bases in general coordinate systems maxima and minima of functions of two variables line integrals integral theorems and more 1963 edition **The Thirteen Books of Euclid's Elements** Euclid,Sir Thomas Little Heath,1956-01-01 The definitive edition of one of the very greatest classics of all time the full Euclid encompassing almost 2500 years of mathematical and historical study This unabridged republication of the original enlarged edition contains the complete English text of all 13 books of the ELEMENTS plus analyses of each definition postulate and proposition **The Divine Proportion** H. E. Huntley,2012-06-08 Discussion ranges from theories of biological growth to intervals and tones in music Pythagorean numerology conic sections Pascal s triangle the Fibonnacci series and much more Excellent bridge between science and art Features 58 figures **The Thirteen Books of the Elements** Euclid,2012-08-15 Volume 2 of 3 volume set containing complete English text of all 13 books of the Elements plus critical analysis of each definition postulate and proposition Vol 2 includes Books 3 9 Circles relationships rectilinear figures **Fundamentals of Number Theory** William J. LeVeque,2014-01-05 This excellent textbook introduces the basics of number theory incorporating the language of abstract algebra A knowledge of such algebraic concepts as group ring field and domain is not assumed however all terms are defined and examples are given making the book self contained in this respect The author begins with an introductory chapter on number theory and its early history Subsequent chapters deal with unique factorization and the GCD quadratic residues number theoretic functions and the distribution of primes sums of squares quadratic equations and quadratic fields diophantine approximation and more Included are discussions of topics not always found in introductory texts factorization and primality of large integers p adic numbers algebraic number fields Brun s theorem on twin primes and the transcendence of e to mention a few Readers will find a substantial number of well chosen problems along with many notes and bibliographical references selected for
