Handbook of Applications of Chaos Theory Christos H. Skiadas, Charilaos Skiadas, 2017-12-19 In addition to explaining and modeling unexplored phenomena in nature and society chaos uses vital parts of nonlinear dynamical systems theory and established chaotic theory to open new frontiers and fields of study Handbook of Applications of Chaos Theory covers the main parts of chaos theory along with various applications to diverse areas Expert contributors from around the world show how chaos theory is used to model unexplored cases and stimulate new applications Accessible to scientists engineers and practitioners in a variety of fields the book discusses the intermittency route to chaos evolutionary dynamics and deterministic chaos and the transition to phase synchronization chaos It presents important contributions on strange attractors self exciting and hidden attractors stability theory Lyapunov exponents and chaotic analysis It explores the state of the art of chaos in plasma physics plasma harmonics

and overtone coupling It also describes flows and turbulence chaotic interference versus decoherence and an application of microwave networks to the simulation of quantum graphs The book proceeds to give a detailed presentation of the chaotic rogue and noisy optical dissipative solitons parhelic like circle and chaotic light scattering and interesting forms of the hyperbolic prism the Poincaré disc and foams It also covers numerous application areas from the analysis of blood pressure data and clinical digital pathology to chaotic pattern recognition to economics to musical arts and research

Linear-Fractional Programming Theory, Methods, Applications and Software E.B. Bajalinov, 2013-12-01 This is a book on Linear Fractional Programming here and in what follows we will refer to it as LFP The field of LFP largely developed by Hungarian mathematician B Martos and his associates in the 1960 s is concerned with problems of optimization LFP problems deal with determining the best possible allocation of available resources to meet certain specifications In particular they may deal with situations where a number of resources such as people materials machines and land are available and are to be combined to yield several products In linear fractional programming the goal is to determine a permissible allocation of resources that will maximize or minimize some specific showing such as profit gained per unit of cost or cost of unit of product produced etc Strictly speaking linear fractional programming is a special case of the broader field of Mathematical Programming LFP deals with that class of mathematical programming problems in which the relations among the variables are linear the constraint relations i.e. the restrictions must be in linear form and the function to be optimized i.e. the objective function must be a ratio of two linear functions

Matrix Methods: Theory, Algorithms And Applications - Dedicated To The Memory Of Gene Golub Vadim Olshevsky, Eugene E Tyrtyshnikov, 2010-04-05 Compared to other books devoted to matrices this volume is unique in covering the whole of a triptych consisting of algebraic theory algorithmic problems and numerical applications all united by the essential use and urge for development of matrix methods This was the spirit of the 2nd International Conference on Matrix Methods and Operator Equations from 23-27 July 2007 in Moscow that was organized by Dario Bini Gene Golub Alexander Guterman Vadim Olshevsky Stefano Serra Capizzano Gilbert Strang and Eugene Tyrtyshnikov Matrix methods provide the key to many problems in pure and applied mathematics However linear algebra theory numerical algorithms and matrices in FEM BEM applications usually live as if in three separate worlds In this volume maybe for the first time ever they are compiled together as one entity as it was at the Moscow meeting where the algebraic part was impersonated by Hans Schneider algorithms by Gene Golub and applications by Guri Marchuk All topics intervened in

plenary sessions are specially categorized into three sections of this volume The soul of the meeting was Gene Golub who rendered a charming Golub s dimension to the three main axes of the conference topics This volume is dedicated in gratitude to his memory *Simulation of Material Processing: Theory, Methods and Application* Ken-ichiro Mori,2001-01-01 This volume contains about 180 papers including seven keynotes presented at the 7th NUMIFORM Conference It reflects the state of the art of simulation of industrial forming processes such as rolling forging sheet metal forming injection moulding and casting Symmetrical Analysis Techniques for Genetic Systems and Bioinformatics: Advanced Patterns and Applications Petoukhov, Sergey,He, Matthew,2009-10-31 This book compiles studies that demonstrate effective approaches to the structural analysis of genetic systems and bioinformatics Provided by publisher
