Handbook for Matrix Computations Thomas F. Coleman, Charles Van Loan, 1988-01-01 Provides the user with a step by step introduction to Fortran 77 BLAS LINPACK and MATLAB It is a reference that spans several levels of practical matrix computations with a strong emphasis on examples and hands on experience Introduction to Matrix Computations G. W.

Stewart, 1973-06-15 Numerical linear algebra is far too broad a subject to treat in a single introductory volume Stewart has chosen to treat algorithms for solving linear systems linear least squares problems and eigenvalue problems involving matrices whose elements can all be contained in the high speed storage of a computer By way of theory the author has chosen to discuss the theory of norms and perturbation theory for linear systems and for the algebraic eigenvalue problem These choices exclude among other things the solution of large sparse linear systems by direct and iterative methods linear programming and the useful Perron Frobenius theory and its extensions However a person who has fully mastered the material in this book should be well prepared for independent study in other areas of numerical linear algebra **Linear**

Algebra and Matrix Computations with MATLAB® Dingyü Xue, 2020-03-23 This book focuses the solutions of linear algebra and matrix analysis problems with the exclusive use of MATLAB The topics include representations fundamental analysis transformations of matrices matrix equation solutions as well as matrix functions Attempts on matrix and linear algebra applications are also explored *Polynomial and Matrix Computations* Dario Bini, Victor Y. Pan, 2012-12-06 Our Subjects and Objectives This book is about algebraic and symbolic computation and numerical computing with matrices and polynomials It greatly extends the study of these topics presented in the celebrated books of the seventies AHU and BM these topics have been under represented in CLR which is a highly successful extension and updating of AHU otherwise Compared to AHU and BM our volume adds extensive material on parallel computations with general matrices and polynomials on the bit complexity of arithmetic computations including some recent techniques of data compression and the study of numerical approximation properties of polynomial and matrix algorithms and on computations with Toeplitz matrices and other dense structured matrices The latter subject should attract people working in numerous areas of application in particular coding signal processing control algebraic computing and partial differential equations The authors teaching experience at the Graduate Center of the City University of New York and at the University of Pisa suggests that the book may serve as a text for advanced graduate students in mathematics and computer science who have some knowledge of algorithm design and wish to enter the exciting area of algebraic and numerical computing The potential readership may also include algorithm and software designers and researchers specializing in the design and analysis of algorithms computational complexity algebraic and symbolic computing and numerical computation Parallel Algorithms for Matrix Computations K. Gallivan, M.

Heath, E. Ng, B. Peyton, R. Plemmons, J. Ortega, C. Romine, A. Sameh, R. Voigt, 1990-01-01 Describes a selection of important parallel algorithms for matrix computations Reviews the current status and provides an overall perspective of parallel algorithms for solving problems arising in the major areas of numerical linear algebra including 1 direct solution of dense structured or sparse linear systems 2 dense or structured least squares computations 3 dense or structured eigenvalue and singular value computations and 4 rapid elliptic solvers The book emphasizes computational primitives whose efficient execution on parallel and vector computers is essential to obtain high performance algorithms Consists of two comprehensive survey papers on important parallel algorithms for solving problems arising in the major areas of numerical linear algebra direct solution of linear systems least squares computations eigenvalue and singular value computations and rapid elliptic solvers plus an extensive up to date bibliography 2 000 items on related research
