Matrix Metalloproteinase Inhibitors In Cancer Therapy:

Matrix Metalloproteinase Inhibitors in Cancer Therapy Neil J. Clendeninn, Krzysztof Appelt, 2000-09-17 Cutting edge investigators review the current status of the entire field from the biology of MMPs through the current clinical studies The authors include many leading scientists from pharmaceutical companies who present all the latest concepts and results on the preferred design strategies for MMP inhibitors their molecular mechanisms and their substrates In addition they fully describe their personal research on specific MMP inhibitors detailing vanguard design strategies their in vitro activity the outcome of animal model studies and where available their toxicology safety efficacy in human clinical trials Comprehensive and state of the art Matrix Metalloproteinase Inhibitors in Cancer Therapy offers basic and clinical investigators alike a richly informative summary of all the latest research on these powerful new drugs and their high promise as emerging cancer therapeutics

Matrix Metalloproteinase Inhibitors Satya Prakash Gupta, 2012-04-07 Matrix metalloproteinases MMPs are proteolytic enzymes that are involved in many physiological and pathological processes The field of MMP research is very important due to the implications of the distinct paralogs in both human physiology and pathology Over activation of these enzymes results in tissue degradation producing a wide array of disease processes such as rheumatoid arthritis osteoarthritis tumor growth and metastasis multiple sclerosis congestive heart failure and others Thus MMP inhibitors are candidates for therapeutic agents to combat a number of diseases The present book discusses the design and development of different classes of inhibitors of important classes of MMPs such as gelatinases and collagenases The articles focus specifically on structure activity relationships of all classes of compounds and on their modes of action and specificity of binding with the receptors based on experimental and theoretical studies These studies constitute a valuable asset for all those involved in drug development

Camptothecins in Cancer Therapy Val R. Adams, 2007-10-27 A critical review our current understanding of camptothecins their shortcomings and of the possibilities for improving their clinical performance The authors discuss new camptothecin analog development drug delivery issues for optimizing their anticancer activity and their potential use in a variety of different cancers Additional chapters describe what is known about the biochemistry the pharmacology and the chemistry of the camptothecins including the mechanism of topoisomerase and how camptothecins poison this enzyme the use of animal models in defining the anticancer potential of camptothecins and the question of camptothecin resistance

EGFR Signaling Networks in Cancer Therapy John D. Haley, William John Gullick, 2009-03-01 The epidermal growth factor EGF receptor and its downstream signal transduction networks have been implicated in the ontology and maintenance of tumor tissues which has motivated the discovery and development of molecularly targeted anti EGF receptor therapies Over decades of study the EGF receptor structure its ligand binding domains the physical biochemistry underlying its intrinsic tyrosine kinase catalytic function and the modular interactions with SH2 PTB and SH3 domain containing signaling adaptor proteins required for signal transduction have been extensively dissected Not only is the

EGF receptor the nexus of many streams of information but it also forms one part of a calculating device by forming dimers and oligomers with the other three receptors in its family in response to at least eleven ligands some of which are expressed in multiple forms with overlapping or quite distinct functions This phenomenon while recruiting to the inner surface of the cell membrane and activating multiple second messenger proteins also allows the possibility of cross talk between these systems permitting a further layer of information to be exchanged Less well described are the cross regulation of the EGF receptor and other anti apoptotic mitogenic and metabolic signaling systems The study of these systems has yielded new surprises One hurdle in these efforts has been that signal transduction pathways have frequently been defined in the generic absence of their tissue specific or cell interaction specific context

Radiolabeled Matrix Metalloproteinase Inhibitors for Breast Cancer Therapy, 2002 Matrix Metalloproteinases MMPs a family of over 20 types of enzymes collectively are capable of degrading all the components of the extracellular matrix MMP 2 and MMP 9 also known as gelatinases are specifically thought to play critical roles in tumor cell invasion and are frequently co expressed in breast cancer Cyclic peptides containing the sequence HWGF have been described as selective inhibitors of MMP 2 and MMP 9 We tested the hypothesis that gelatinase expression may provide a target for in vivo tumor imaging using a radiolabeled gelatinase inhibitor The peptide DOTA CTTHWGFTLC DOTA CTT was labeled with Cu 64 T 1 2 1 2% I 2 7 h % which has a decay scheme suitable for both PET imaging and cancer therapy This conjugate maintained MMP 2 inhibitory activity comparable to %Ilomastat a broad range inhibitor of MMPs An increase in the MMP 2 9 activity of human metastatic breast cancer MDA MB 435 tumors in nude mice was observed from 4 to 10 weeks post implantation MicroPET images of Cu 64 DOTA CTT in the tumor bearing nude mice showed tumor uptake at 8 wk post implantation however the same mouse with 5 wk palpable tumors showed no uptake of the tracer suggesting that the MMP 2 and MMP 9 activity is related to the stage of tumor growth These data suggest the potential of radiolabeled gelatinase inhibitors as markers for imaging the metastatic capability of human breast cancer

Nanotechnology for Cancer Therapy Mansoor M. Amiji, 2006-12-19 While simultaneous breakthroughs occurring in molecular biology and nanoscience technology will ultimately revolutionize all of medicine it is with our efforts to prevent diagnose and treat cancer that many of the most dramatic advances will occur In support of this potential the U S National Cancer Institute NCI established the Alliance for

Death Receptors in Cancer Therapy Wafik S. El-Deiry, 2007-11-15 An in depth review of our latest understanding of the molecular events that regulate cell death and those molecules that provide targets for developing agonists or antagonists to modulate death signaling for therapeutic purposes The authors focus on the extrinsic system of death receptors their regulation and function and their abnormalities in cancer Topics of particular interest include resistance to apoptosis TRAIL signaling death receptors in embryonic development mechanisms of caspase activation and death receptor mutations in cancer Additional chapters address death signaling in melanoma synthetic retinoids and death receptors the role of p53 in death receptor regulation immune suppression of cancer

and combination therapy with death ligands **Integration/Interaction of Oncologic Growth** Gary G. Meadows, 2005-05-25 A unique book on the interactions and interrelationships between tumor and host that modulate progression and metastasis Several authors emphasize targeting the host rather than the tumor itself for therapeutic intervention to control cancer Angiogenesis & Therapeutic Targets in Cancer Malay Chatterjee, Ajay Rana, Basabi Rana, 2010 Angiogenesis plays rate limiting roles in tumor growth and invasion Angiogenesis inhibition has been proposed as a general strategy to fight against cancers This book covers different therapeutic targets for angiogenesis interventions with emphasis on c Immunotherapy of Cancer Mary L. Disis, 2007-10-28 Expert bench and clinical scientists join forces to concurrently review both the state of the art in tumor immunology and its clinical translation into promising practical treatments The authors explain in each chapter the scientific basis behind such therapeutic agents as monoclonal antibodies cytokines vaccines and T cells and illustrate their clinical manipulation to combat cancer Additional chapters address statistical analysis both of clinical trials and assay evaluations methods for the discovery of antigens adoptive T cell therapy and adaptive and innate immunity The challenges in clinical trial design the need for biomarkers of response such as novel imaging techniques and immunologic monitoring and the new advances and directions in cancer immunotherapy are also fully examined Therapeutic Targets in Airway Inflammation N. Tony Eissa, David P. Huston, 2003-05-13 This reference examines the cellular molecular and genetic mechanisms involved in airway inflammation as well as the pathophysiology epidemiology and aetiology of asthma It explores strategies to prevent cellular injury and oxidative tissue damage inhibit key inflammatory pathways and identify disease specific targets to reduce the induction **Hydroxamic Acids** Satya P. Gupta, 2013-09-30 Satya P Gupta s Hydroxamic Acids is the first book to compile invited articles written by international experts on the class of compounds hydroxamic acids Found to possess a wide spectrum of biological activities the hydroxamic acids are of interest to theoretical and experimental chemists who can study and make use of them in drug design and development Chapters in this book provide a diverse and comprehensive coverage of this compound class and consequently this publication is a valuable resource for researchers in chemical pharmaceutical and biological sciences **Cell Invasion** Jyrki Heino, 2002-08-01 Provides an overview of cell invasion Topics include information on the cellular matrix cell surface integrins matrix metalloproteinases and proteinases and the interplay between protein families *Targeted Therapies in Oncology* Giuseppe Giaccone, Jean-Charles Soria, 2007-09-25 Targeted therapy is one of the most burgeoning areas of development in cancer research Increasing knowledge in tumor formation and growth at the molecular level has generated a broad array of therapeutic options including signal transduction inhibition anti angiogenic and anti vascular agents cell cycle inhibitors telomerase and telomere inter Antiangiogenic Cancer Therapy Darren W. Abbruzzese, 2007-07-25 Top Investigators Explore the Complexities of Angiogenesis Cancer Research The targeting of tumor angiogenesis has evolved into one of the most widely pursued therapeutic strategies However as of yet no antiangiogenic

agent used as a monotherapy has demonstrated a survival benefit in a randomized Phase III trial The combination of bev

Therapeutics of Natural and Synthetic Compounds in Protease-Induced Cancer Sajal Chakraborti, 2025-06-07

Transforming Growth Factor-Beta in Cancer Therapy, Volume II Sonia B. Jakowlew, 2010-01-01 Transforming Growth Factor B in Cancer Therapy Volume II Cancer Treatment and Therapy The chapters in this volume confer an abundance of knowledge about the current

state of our understanding of transforming growth factor β (TGF β) in cancer treatment and therapy. Unlike several more traditional positive polypeptide growth factors that stimulate cellular proliferation, the prototypical TGF β is now known to inhibit the growth of most normal cell types, including those of epithelial and mesenchymal origin. However, there are examples of cell types that can be stimulated by TGF β under certain conditions. TGF β also induces the accumulation of matrix molecules by stimulating their synthesis as well as inhibiting their degradation. Moreover, TGF β induces apoptosis of certain cell types, thereby restricting their proliferation. Overactivity of TGF has been linked to several diseases. For instance, the effect of TGF on matrix accumulation contributes to fibrotic conditions like glomerulonephritis, lung fibrosis, and liver cirrhosis. TGF has a very complicated role in cancer that is only beginning to be understood. Journal of the National Cancer Institute, 2002. Each issue is packed with extensive news about important cancer-related science, policy, politics, and people. Plus, there are editorials and reviews by experts in the field, book reviews, and commentary on timely topics.

Enzyme Inhibition and Bioapplications Rakesh Sharma, 2012-05-09. Enzyme Inhibition and Bioapplications is a concise book on applied methods of enzymes used in drug testing. The present volume will serve the purpose of applied drug evaluation methods in research projects as well as relatively experienced enzyme scientists who might wish to develop their experiments further. Chapters are arranged in the order of basic concepts of enzyme inhibition and physiological basis of cytochromes, followed by new concepts of applied drug therapy, reliability analysis, and new enzyme applications from a mechanistic point of view.
