Matter Of Images:

The Matter of Images Richard Dyer, 2013-04-15 Now published in a revised second edition *The Matter of Images* searches through the resonances of the term representation analysing images in terms of why they matter what they are made of and the material realities they refer to Richard Dyer's analyses consider representations of out groups and traditionally dominant groups alike and encompass the eclectic texts of contemporary culture from queers to straights political correctness representations of Empire and films including *Gilda* *Papillon* and *The Night of the Living Dead* Essays new to the second edition discuss Lillian Gish as the ultimate white movie star the representation of whiteness in the South in *Birth of a Nation* and society's fascination with serial killers *The Matter of Images* is distinctive in its commitment to writing politically about contemporary culture while insisting on the importance of understanding the formal qualities and complexity of the images it investigates

The Image in French Philosophy Temenuga Trifonova, 2007 *The Image in French Philosophy* challenges dominant interpretations of Bergson Sartre Lyotard Baudrillard and Deleuze by arguing that their philosophy was not a critique but a revival of metaphysics as a thinking pertaining to impersonal forces and distinguished by an aversion to subjectivity and an aversion of the philosophical gaze away from the discourse of vision and thus away from the image Insofar as the image was part of the discourse of subjectivity representation getting rid of the subject involved smuggling the concept of the image out of the discourse of subjectivity representation into a newly revived and ethically flavored metaphysical discourse a metaphysics of immanence which was more interested in consciousness rather than subjectivity in the inhuman rather than the human in the virtual rather than the real in Time rather than temporalization in Memory rather than memory images in Imagination rather than images in sum in impersonal forces de personalizing experiences states of dis embodiment characterized by the breaking down of sensory motor schemata Bergson's pure memory Sartre's image consciousness Deleuze's time image or more generally in that which remains beyond representation i.e. beyond subjectivity Lyotard's sublime Baudrillard's fatal object The book would be of interest to scholars and students of philosophy aesthetics and film theory

The Embodied Image Juhani Pallasmaa, 2011-05-16 *The Embodied Image* The Embodied Image Imagination and Imagery in Architecture Juhani Pallasmaa All artistic and architectural effects are evoked mediated and experienced through poeticised images These images are embodied and lived experiences that take place in the flesh of the world becoming part of us at the same time that we unconsciously project aspects of ourselves on to a conceived space object or event Artistic images have a life and reality of their own and they develop through unexpected associations rather than rational and causal logic Images are usually thought of as retinal pictures but profound poetic images are multi sensory and they address us in an embodied and emotive manner Architecture is usually analysed and taught as a discipline that articulates space and geometry but the mental impact of architecture arises significantly from its image quality that integrates the various aspects and dimensions of experience into a singular internalised and remembered entity The material

reality is fused with our mental and imaginative realm The book is organised into five main parts that look at in turn the image in contemporary culture language thought and the image the many faces of the image the poetic image and finally the architectural image The Embodied Image is illustrated with over sixty images in pairs which are diverse in subject They range from scientific images to historic artistic and architectural masterpieces Artworks span Michelangelo and Vermeer to Gordon Matta Clark and architecture takes in Modern Masters such as Mies van der Rohe Le Corbusier and Alvar Aalto as well as significant contemporary works by Steven Holl and Daniel Libeskind

The Moving Eye Edward Dimendberg, 2019-05-09 Once the province of film and media scholars today the moving image is of broad concern to historians of art and architecture and designers of everything from websites to cities As museums and galleries devote increasing space to video installations which no longer presuppose a fixed viewer urban space becomes envisioned and planned through fly throughs and technologies such as GPS add data to the experience of travel moving images have captured the attention of geographers and scholars across the humanities and social sciences Their practice of mobility studies is remaking how we understand a contemporary world in relentless motion Media theorist and historian Anne Friedberg 1952 2009 was among the first practitioners of visual studies to theorize the experience of vision in motion Her books have become key points of reference in the discussion of the windows that frame images and the viewers in motion who perceive them Although widely influential beyond her own discipline Friedberg's work has never been the subject of an extended study The Moving Eye Film Television Architecture Visual Art and the Modern gathers together essays by

renowned thinkers in media studies art history architecture and museum studies to consider the rich implications of her work for understanding film and video new media visual art architecture exhibition design urban space and virtual reality Ranging from early cinema to works by Le Corbusier Sergei Eisenstein Gordon Matta Clark and Pierre Huyghe to theories of the image in motion informed by psychoanalysis theories of the public sphere and animal studies each of the nine essays in the book advances the lines of inquiry commenced by Friedberg

Synaesthesia Michael Banissy, Roi Cohen Kadosh, Clare Jonas, 2015-10-07 Synaesthesia is a rare experience in which one property of a stimulus evokes a secondary experience that is not typically associated with the first e.g. hearing words can evoke tastes In recent years a number of studies have highlighted the authenticity of synaesthesia and attempted to use the experience to inform us about typical processes in perception and cognition This Research Topic brings together research on synaesthesia and typical cross modal interactions to discuss the mechanisms of synaesthesia and what it can tell us about typical perceptual processes Topics include but are not limited to the neurocognitive mechanisms that give rise to synaesthesia the extent to which synaesthesia does does not share commonalities with typical cross modal correspondences broader cognitive and perceptual consequences that are linked to synaesthesia and perspectives on the origins defining characteristics of synaesthesia

Being and Film Christine Reeh-Peters, 2021-03-16 This book develops the so called solaristic ontology of film by building a philosophical system based on an inquiry into the nature of film being and reality This solaristic system appropriates the aesthetic ideas and principles of thought present in the 1972 sci fi movie Solaris by Andrei Tarkovsky This movie is the main center of analysis here since it is highly symptomatic of the medium's philosophical self reflexivity and its intriguing correlation with reality and being The solaristic science is a fictional science introduced in the movie's diegesis and dedicated to the investigation of the planet Solaris an unattainable challenge In this sense the solaristic system closes the film's narrative by telling a philosophical story on the planet Solaris The book thus details a philosophical form of concept art and at the same time builds on previous results of film philosophy as well as the speculative turn in contemporary philosophy

Life Force for Beginners Harry Eilenstein, 2021-05-31 Life force is one of the central concepts in magic but it is usually used only associatively and while filled with many feelings is rarely really defined precisely

In this book the life force is examined in detail and described in terms of what it could be and also what it cannot be There are many questions about this subject and trying to answer them leads to much sharper contours of the life force Some of these research questions are Is the life force a force or a substance Where is the life force actually located What is its relationship to consciousness and matter What is its relationship to analogies What do we see in clairvoyance Why is there no independent life force perception something like seeing by the eye hearing by the ear smelling by the nose Why does the life force organize itself in the structure of the chakra system And why is there the same structure in a solar system
