Pediatric Thoracic Surgery D.H. Parikh, David Crabbe, Alex Auldist, Steven Rothenberg, 2009-03-26 In most parts of the world the treatment of adults with surgically correctable abnormalities of the thorax and its contents is provided by specially trained thoracic surgeons On the other hand in children pediatric general surgeons usually take on this role because of their training in the surgical care of sick infants and children and their experience with the management of congenital malformations In an ideal world the treatment of surgical disorders of the thorax in children would be provided by a super specialist but this is neither practical nor possible This text provides information that will help bridge the gap for a group of conditions often only encountered rarely by otherwise experienced surgeons This book is not designed to be a textbook of operative surgery Instead the broad scope is to provide important up to date information and reference material relating to most of the thoracic surgical conditions seen in childhood The editors and contributors have ably met their goal to give the reader the proper medical and surgical principles needed to treat these childhood conditions One can't help to note the impressive array of

authors from around the world When I first started out in pediatric surgery only a few pediatric surgeons in a few centers would dare tackle some of the abnormalities noted in these chapters Others who dared because they had no other choice often failed Now it is clear that globalization has truly come to our discipline

The Respiratory Tract in Pediatric Critical Illness and Injury Derek S. Wheeler,Hector R. Wong,Thomas P. Shanley,2008-12-18 The principal role of the respiratory system is to permit efficient exchange of respiratory gases O₂ and CO₂ with the environment The respiratory system is unique in that it is constantly exposed to a barrage of foreign substances from both the internal environment at any one point in time approximately one half of the cardiac output is received by the lungs and the external environment with each breath the respiratory tract is exposed to pollens viruses bacteria smoke etc According to the Centers for Disease Control and Prevention diseases of the respiratory system were the seventh and eighth leading causes of deaths in children aged 1 to 19 years in 2003 1 Dr George A Gregory one of the founding fathers of pediatric critical care medicine once estimated that acute respiratory failure accounts for nearly 50% of all admissions to the pediatric intensive care unit PICU 2 Just as important are the many diseases that affect the respiratory system that are not associated with acute respiratory failure but nevertheless constitute a major portion of the practice of pediatric critical care medicine some of which account for significant morbidity and mortality 3 Once again we would like to dedicate this textbook to our families and to the physicians and nurses who provide steadfast care every day in pediatric intensive care units across the globe Derek S Wheeler Hector R Wong Thomas P
