The Rush to Policy Peter William House, Roger Don Shull, Rush to Policy explores the appropriate role of technical analysis in policy formulation The authors ask when and how the use of sophisticated analytic techniques in decision making benefits the nation They argue that these techniques are too often used in situations where they may not be needed or understood by the decision maker where they may not be to answer the questions raised but are nonetheless required by law House and Shull provide an excellent empirical base for describing the impact of politics on policies policy analysis and policy analysts They examine cost benefit analysis risk analysis and decision analysis and assess their ability to substitute for the current decision making process in the public sector They examine the political basis of public sector decision making how individuals and organizations make decisions and the ways decisions are made in the federal sector Also they discuss the mandate to use these methods in the policy formulation process The book is written by two practicing federal policy analysts who in a decade of service as policy researchers developed sophisticated quantitative analytic and decision making techniques They then spent several years trying to use them in the real world Success and failures are described in illuminating detail providing insight not commonly found in such critiques The authors delineate the interaction of politics and technical issues Their book describes policy analysis as it is not how it ought to be Peter W House is the director of policy research and analysis at the National Science Foundation He is the author of ten books on multidisciplinary science and technology policy research and analyses in government private and university sectors including *The Art of Public Policy Analysis* and with Roger D Shull *Regulatory Reform Politics and the Environment and Regulations and Science Management of Research on Demand* Roger D Shull is a senior analyst at the Division of Policy Research and Analysis National Science Foundation

Images of the New Jerusalem Craig S. Campbell, 2004 The Kansas City suburb of Independence Missouri is associated primarily with its most famous son President Harry Truman Yet Independence is also home to a unique and complex religious landscape regarded as sacred space by hundreds of thousands of people associated with the Latter Day Saint family of churches In 1831 Joseph Smith the founder of the Latter Day Saint LDS movement declared Independence the site of the New Jerusalem where followers would build a sacred city the center of Zion Smith prophesied that Jesus Christ would return in millennial and glorious advent to Independence an act that would make the city an American counterpart to old world Jerusalem Smith's plan would have mixed the best qualities of nineteenth century American pastoral and urban psyche However the great splintering among returning Latter Day Saint groups has led to divergent beliefs and multiple interpretations of millennial place Images of the New Jerusalem culls viewpoints from publications and interviews and contrasts them with official church doctrines and mapped land holdings For example with a desire to attract mainstream American the Western LDS Church which holds the largest amount of land in northwestern Missouri keeps fairly silent on the New Jerusalem while the RLDS Church now the Community of Christ has dropped millennial claims gradually adopting a liberal secular style of pseudo Protestantism Smaller groups independent of these two see sacred space in more spatially and doctrinally limited ways The religious ecology among Latter Day Saint churches allows each group its place in the public spotlight and a number of sociopolitical mechanisms reduce conflict among them Nonetheless Independence has developed many traits of the world's most seasoned and conflicted sacred places over a relatively short time This book opens the field of scholarship on this region where profound spatial and doctrinal variation continues Craig S Campbell is professor of geography at Youngstown State University He has published articles in *Journal of Cultural Geography* *Cartographica* *The Professional Geographer* *Political Geography* and other journals [Geography and Politics in Israel Since 1967](#) Elisha Efrat, 2005-08-16 First Published in 1988 Routledge is an imprint of Taylor Francis an informa company

Self-Organization and the City Juval Portugali, 2012-12-06 Cities first came into existence more than five thousand years ago How to deal with these partly fascinating partly frightening creatures of mankind both practically and intellectually concerns all of us and in particular presents areal challenge to city planners Each historical epoch has had its own particular attitudes associated with the Zeitgeist Accordingly the planning and steering of cities were based on quite different criteria But in spite of these differences the concept of planning and steering was and still is the cornerstone of our dealing with cities Nevertheless the planner's dilemma is becoming more and more visible cities and megacities seem to be unplannable In this book Juval Portugali introduces a new idea Cities are self organizing systems To substantiate his revolutionary concept he uses several interlinked methods On the one hand and to my own delight he employs in his arguments theoretical tools developed in the interdisciplinary field of synergetics On the other hand jointly with his co workers he has performed detailed model

Complexity, Cognition and the City Juval Portugali, 2011-07-06 Complexity Cognition and the City aims at a deeper understanding of urbanism while invoking on an equal footing the contributions both the hard and soft sciences have made and are still making when grappling with the many issues and facets of regional planning and dynamics In this work the author goes beyond merely seeing the city as a self organized emerging pattern of some collective interaction between many stylized urban agents he makes the crucial step of attributing cognition to his agents and thus raises for the first time the question on how to deal with a complex system composed of many interacting complex agents in clearly defined settings Accordingly the author eventually addresses issues of practical relevance for urban planners and decision makers The book unfolds its message in a largely nontechnical manner so as to provide a broad interdisciplinary readership with insights ideas and other stimuli to encourage further research with the twofold aim of further pushing back the boundaries of complexity science and emphasizing the all important interrelation of hard and soft sciences in recognizing the cognitive sciences as another necessary ingredient for meaningful urban studies
