Principles Of Air Pollution Meteorology:

First Principles of Meteorology and Air Pollution Mihalis Lazaridis, 2010-11-18 This book's main objective is to decipher for the reader the main processes in the atmosphere and the quantification of air pollution effects on humans and the environment through first principles of meteorology and modelling measurement approaches. The understanding of the complex sequence of events starting from the emission of air pollutants into the atmosphere to the human health effects as the final event is necessary for the prognosis of potential risk to humans from specific chemical compounds and mixtures of them. It fills a gap in the literature by providing a solid grounding in the first principles of meteorology and air pollution making it particularly useful for undergraduate students. Its broad scope makes it a valuable text in many related disciplines containing a comprehensive and integrated methodology to study the first principles of air pollution meteorology indoor air pollution and human exposure. Problem solving exercises help to reinforce concepts. Principles of Air Pollution

Meteorology Lyons T J, 1992 **Principles of Air Pollution Meteorology** Lyons, 1990-02 Air Pollution Meteorology is concerned with the behaviour of pollutants once they are emitted into the atmosphere. This includes natural releases, deliberate industrial emissions and accidental spills. The emphasis is on industrial emissions but the authors also discuss ways of analysing and predicting the dispersal of all atmospheric emissions. **Principles of Air Pollution Meteorology** T. J. This book discusses the meteorology of air pollution and the behavior of the atmosphere which differentiates air pollution from the various aspects of environmental management and protection. Organized into four parts encompassing 28 chapters, this text begins with an overview of the gaseous composition of unpolluted air including nitrogen, oxygen, water, argon, carbon dioxide, neon, helium, methane, hydrogen, nitrous oxide, and

organic vapor This book then differentiates the primary pollutants that are emitted directly from the source and the secondary pollutants that cause eye irritation smog and haze Other chapters consider the adverse effects of air pollution to human health environment and economy This book is a valuable resource to air pollution space atmospheric and medical scientists as well as environmentalists ecologists biologists and meteorologists This text will also be useful to economists engineers sanitarians chemists public administrators educators public relations specialists researchers and students
