

COGNITIVE PSYCHOLOGY

Cognitive psychology is the scientific study of mental processes. This includes trying to understand how people store and recall memories and acquire and use language.

UNDERSTANDING COGNITION

"The term cognition refers to all processes by which sensory input is transformed, reduced, elaborated, recovered, and used...Giving such a sweeping definition, it is apparent that cognition is involved in everything a human being might possibly do"
(Neisser, 1967, p. 4).

We invited the leaders in the field to attend this inaugural meeting and were delighted by the quality of the attendance, the papers delivered at the workshop, and this book. Many of the authors have subsequently run other meetings funded by the Special Programme and have or are in the process of editing books which focus on particular topics. This book covers all the major themes in the area ranging from fundamental theoretical work to empirical studies of state of the art technological innovations. Tim O'Shea chaired the NATO Survey Group which planned the Programme and the subsequent Panel which disbursed funds in the first two years of the Programme. He would like to thank the other group and panel members namely Professor N Balacheff, Professor D Björner, Professor H Bouma, Professor P C Duchastel, Professor A Dias de Figueiredo, Dr D Jonassen, and Professor T Liao. He would like to offer his special thanks to Dr L V da Cunha, the NATO Programme Director, for his unfailing support and patience. Eileen Scanlon was the Director of the Workshop which is the basis of this book. She offers heartfelt thanks to the contributors and to the following who provided practical help with the meeting or the production of this book: Mrs Pauline Adams, Dr Mike Baker, Mrs Kathy Evans, Mrs Patricia Roe, Mr Dave Perry, and Ms Fiona Spensley.

The editors present state of the art reviews that cover the experimental analysis of behavior as well as the biological basis of learning and memory and that overcome traditional borders separating disciplines. The chapters present and evaluate core findings of human learning and memory that are obtained in different fields of research and on different levels of analysis e.g. cellular, neural network, behavioral level. The volume provides an integrated pattern of results wherever this is possible. The reader acquires a broad and integrated perspective of human learning and memory based on current approaches.
