Second Revised Edition 33

Principles Of Environmental Science And Technology Second Revised Edition 33:

Environmental Science Theory W.T. de Groot, 1992-10-22 Having no competitive works this unique publication presents a single structure for the analysis explanation and solution of environmental problems regardless of their location nature or scale In this problem oriented approach a coherent framework interconnects the study of facts and values environmental systems social causes and ethical premises Counterbalancing current biases the author emphasizes the fundamental normative economic and social scientific aspects of truly interdisciplinary environmental science For instance the normative side of environmental problems are often neglected resulting in policy designs and evaluations containing inefficient mixtures of sophisticated models and poorly grounded normative premises this is the first major study to enrich the field with more normative consistency and groundedness It is also the first text to consistently identify the social causes of environmental problems rather than focusing on the physical scientific aspects and thus design deeper and more effective policies Furthermore a tinge of post modern thinking runs throughout the book with special care being taken however to constantly keep in view the practical relevance of theory for problem oriented work The book will be of interest to environmental scientists and managers wishing to improve the consistency and depth of their work to social scientists and geographers wishing to connect their discipline to the environmental problems field and to general scientists interested in the connections between philosophy and practice Statistical Methods in Water Resources D.R. Helsel, R.M.

Hirsch, 1993-03-03 Data on water quality and other environmental issues are being collected at an ever increasing rate In the past however the techniques used by scientists to interpret this data have not progressed as quickly This is a book of modern statistical methods for analysis of practical problems in water quality and water resources The last fifteen years have seen major advances in the fields of exploratory data analysis EDA and robust statistical methods The real life characteristics of environmental data tend to drive analysis towards the use of these methods These advances are presented in a practical and relevant format Alternate methods are compared highlighting the strengths and weaknesses of each as applied to environmental data Techniques for trend analysis and dealing with water below the detection limit are topics covered which are of great interest to consultants in water quality and hydrology scientists in state provincial and federal water resources and geological survey agencies The practising water resources scientist will find the worked examples using actual field data from case studies of environmental problems of real value Exercises at the end of each chapter enable the mechanics of the methodological process to be fully understood with data sets included on diskette for easy use The result is a book that is both up to date and immediately relevant to ongoing work in the environmental and water sciences **Environmental Oriented Electrochemistry** C.A.C. Sequeira, 1994-06-06 This book concentrates on the electrochemistry environment relationship including among others chapters on design and operation of electrochemical reactors and separators process simulation development and scale up optimization and control of electrochemical processes applied to environmental

problems also including economic analysis description of unique current and future applications in addition to basic research into developing new technologies It is hoped that this volume will be considered interesting and extremely timely to specialists in electrochemistry and environmental sciences

Handbook of Radioactive Contamination and Decontamination J. Severa, J. Bár, 1991-12-04 The objective of this book is to present a comprehensive picture first of the fundamentals of general contamination of solid surfaces and water and in the second part to review the main practical procedures and means of applied decontamination used in the fields of activity The most emphasis on radioactive contamination deals with decontamination of the operational facilities in nuclear power plants Other special decontamination branches of current interest are also dealt with briefly The art of decontamination is being enriched by the progress achieved in relevant scientific disciplines and employs these relative advances The current volume discusses in detail the following trends in decontamination Firstly the development and use of new decontamination methods that are highly efficient non aggressive to decontaminated materials and economically feasible secondly the utilization of progressive elements of automation and robotics thirdly the development and use of such decontamination formulations that would minimize the volume of wastes and would produce wastes in a form in which they could be either easily further treated or safely disposed of without risk to human health or the environment finally the choice of suitable materials used both for the structural and the technological parts of nuclear installations with regard to their minimal contaminability and ease of decontamination

Global Environmental Biotechnology D.L. Wise, 1997-07-23 Environmental biotechnology is an emerging field of scientific and technological investigations that is truly global Popular recognition is high for the environmental problems being faced and solved by biotechnology methods This book presents selected papers from the 3rd International Symposium of the International Society for Environmental Biotechnology held in Boston in July 1996 The following topics are covered metals mine drainage removal and toxicity waste treatment monitoring bioremediation water quality biodegradation and local national and international issues in biotechnology

Environmental Biotechnology A. Blažej, V. Prívarová, 1991-06-06 The growing awareness of environmental problems provided the stimulus for this 4th International Symposium on Biotechnology Interbiotech 90 to address many aspects of the relationship between biotechnology and the environment The papers are mainly devoted to the contribution of biotechnology in solving environmental problems including biological waste water treatment utilization of municipal sewage sludge detoxification of polluted soil and complex utilization of lignocellulosic wastes There is examination of possible dangers in such cases as the release of r DNA organisms into the environment The relationship of biotechnology and energy e g biogas landfill gas fuel photosynthetic systems for fuel production is also discussed

Acidification Research: Evaluation and Policy Applications T. Schneider, 1992-04-24 A large number of nationwide research programmes in the field of acidification have been carried out in the last decade Especially in Western Europe extensive programmes have resulted in a good overview of all the effects mostly negative

caused by acidifying substances There is now consensus that types of acidification damage relate to the unique geography of an area air pollution affects vegetation acid aerosol the ozone layer New in this volume is the relation between scientific results of integrated research programmes and policy actions to prevent reduce and limit the widespread damage caused by acidification The results of many different national research programmes are evaluated and compared to present a unique compilation for the research scientist and policy maker In this volume thematic reviews on specific topics of acidification research are presented followed by overviews of acidification policy plans and actual abatement plans The result is the best review of acidification research carried out worldwide during the last decade and presentation of the critical relation between research results and policy actions

Freshwater and Estuarine Radioecology G. Desmet, 1997 Hardbound The Chernobyl accident drew attention to the difficulties of understanding the dynamics of radionuclide transport through the environment using older methods developed after the pseudo steady state pollution resulting after the weapons testing fallout More recent approaches which are reported in this book have incorporated both the dynamic aspects highlighted by the pulse Chernobyl input and the importance of improvement in models that can be brought about by constraining parameters on the basis of a knowledge of the fundamental physics chemistry biology and ecology of the ecosystems involved The papers within this volume include hydrodynamic models of suspended solids transport ion exchange interpretation of radionuclide sorption approaches applying a knowledge of membrane transport kinetics to the uptake of radionuclides by biota the effects of different ecological niches on the relative uptake of radionuclides by different species

Asbestos in the Natural Environment H. Schreier, 1989-08-10 Asbestos minerals have novel properties which make them highly desirable for industrial use While the health hazards of asbestos have long been recognized and are well documented in the medical literature ecological and environmental research involving asbestos fibers has only been undertaken in the past 25 years and the significant deleterious effects of asbestos materials on soil and plant ecology has been much less well publicised This book examines non occupational exposure and environmental effects of asbestos relating to animal and plant growth in the natural environment Major nutrient imbalances and excess concentrations of trace metals have been identified as main causes for the poor plant response Given the complexity of the asbestos analysis and the extent of the problem this book attempts to bring together the multitude of subjects pertaining to asbestos in the natural environment with the aim of contributing to a better understanding of the chemical characteristics of asbestos rich materials and their effect on plant growth

Chemistry for Protection of the Environment 1987 L. Pawlowski, E. Mentasti, W.J. Lacy, C. Sarzanini, 1988-12-01 The Chemistry for Protection of the Environment series of conferences has become a most prestigious gathering of leading international scientists and engineers Like its predecessors this sixth conference brought together chemists and chemical engineers involved in environmental protection activities from all over the world

Acid Rain Research: Do We Have Enough Answers? J.W. Erisman, G.J. Heij, 1995-06-28 Representing the Proceedings of the International Speciality

Conference Acid Rain Research Do we have enough answers this book provides a valuable conclusion to the coordinated research on acidification in the Netherlands from 1985 to 1994 The book focuses on atmospheric deposition effects of acid deposition on forest ecosystems in the Netherlands and future acidification research Special attention is given to trace gases ammonia and particle deposition and the overall assessment of deposition loads to ecosystems and soils is also discussed This volume will be invaluable to environmental scientists ecologists and those involved in atmospheric science pollution

Highway Pollution R.S. Hamilton, R.M. Harrison, 1991-08-30 Long before green issues became a subject of widespread concern both editors of the present book were heavily involved in research relating to pollutants in the highway environment The result was the First International Symposium on Highway Pollution in 1983 with subsequent Second and Third Symposia held in London and Munich respectively The proceedings of these three conferences were published respectively as Volumes 33 59 and 93 of The Science of the Total Environment which provided individual insights into developing research projects This book is an attempt at a more coherent overview of highway pollution in which leading international authorities were invited to contribute their works This book covers all aspects of air water and noise pollution in the vicinity of highways Sources transport and effects are reviewed and control by engineering and legal procedures are considered The current state of knowledge is put into perspective in this unique work

Applied Isotope Hydrogeology F.J. Pearson, W. Balderer, H.H. Loosli, B.E. Lehmann, A. Matter, T. Peters, H. Schmassmann, Roland U Gautschi, 1991-04-16 In 1980 Nagra the Swiss National Cooperative for the Storage of Radioactive Waste began a comprehensive field investigation programme to assess the feasibility and safety of a repository for the final disposal of high level radioactive waste in northern Switzerland An international team of scientists has carried out a comprehensive study on the isotope hydrogeology of deep groundwaters One of the major implications of this work pertains to the storage of radioactive waste The study goes far beyond an in depth regional study as it draws together the results of diverse techniques many of which have been re evaluated or further developed This book presents in great detail the results of one of the most comprehensive isotope hydrology studies ever undertaken

Evaluation of Environmental Data for Regulatory and Impact Assessment S. Ramamoorthy, E. Baddaloo, 1991-01-14 Mounting concern for the state of the environment has led to a substantial increase in the collection of environmental data in the past two decades This trend raises issues with regard to the quality assurance and quality control of the data gathering process from sampling to analysis The evaluation of environmental data in terms of quality and relevance for use in the management of toxic chemicals in the environment has reached a critical phase An enormous volume of data is being generated on both residue levels and their effects to meet short and long term needs for regulatory procedures and environmental impact assessments Therefore it is important to verify not only the quality of the data collected but also the choice of relevant test parameters This volume deals with the evolution of analytical methodologies to the current state of the art techniques quality assurance quality control of data requirements and testing procedures for

screening of toxic chemicals including their hazard identification persistence and fate processes in the environment The models currently employed in environmental impact assessment and risk assessment are also discussed in detail Public involvement and participation in regulatory decision making processes is also described It is intended for managers and scientists involved in environmental management and research of toxic chemicals in the environment

Valuation Methods and Policy Making in Environmental Economics H. Folmer, E.C. van Ierland, 1989-05-01 This volume considers in depth some valuation methods and aspects of cost benefit analysis and policy making in environmental economics Part I contains a number of contingent valuation studies for non market assets Part II consists of contributions on the valuation of health and life and deals with the benefits of reduced morbidity from air pollution control In Part III cost benefit analysis for environmental policy making is discussed in a disequilibrium setting and in a macroeconomic context Finally Part IV deals with aspects of policy making particularly benefit estimation for complex policies and the international aspects of transboundary air pollution in Europe The book should not only appeal to students and researchers in university departments of economics and environmental sciences but also to those working in public organisations and associated advisory institutes which are concerned with environmental problems

Becker, 1990-09-11 From 1944 1971 the Hanford Reach of the Columbia River in Washington State received quantities of radioisotopes heat and chemicals from up to 8 plutonium reactors Subsequently from 1971 1984 the same part of the river provided cooling water for 3 power production facilities Environmental concerns promoted a series of continuing studies to examine various potential adverse effects No significant impairment of the rivers ecosystem was detected This book reviews these studies and places them in a historical framework It provides a unique overview of studies made over a 40 year period which are now scattered through various published and unpublished documents It should be of interest to all those concerned with aquatic ecology and environmental concerns

Nordic Radioecology H. Dahlggaard, 1994-10-11 The present treatise is the final milestone in the radioecology programme RAD carried out from 1990 to 1993 under the Nordic Committee for Nuclear Safety Research NKS The book one of the few in its field to have achieved international publication is centred on the contamination of Nordic environments with radionuclides from the Chernobyl accident It contains 30 contributions mainly describing the flow of radiocaesium through aquatic agricultural forest and alpine ecosystems as well as quality assurance and doses to man A series of original papers on various aspects of Nordic post Chernobyl radioecology by leading Nordic scientists is also included along with terms units definitions indexes and an executive summary The volume will be invaluable to all scientists and professionals in radioecology radiation protection trace element cycling and environmental contamination It will also be relevant to general environmental management human contamination civil defence officials
