twelve case studies that use RAISE Rigorous Approach to Industrial Software Engineering to construct analyse develop and apply formal specifications The case studies cover a wide range of application areas including government finance case based reasoning multi language text processing object oriented design patterns component based software design and natural resource management By illustrating the variety of uses of formal specifications the case studies also raise questions about the creation purpose and scope of formal models before they are built Additional resources and complete specifications for all of the case studies and the RAISE tools used to process them are available on the World Wide Web This book will be of particular interest to software engineers especially those responsible for the initial stages of requirements engineering and software architecture and design It will also be of interest to academics and students on advanced formal methods courses

Mechanizing Mathematical Reasoning Dieter Hutter,Werner Stephan,2011-03-29 By presenting state of the art results in logical reasoning and formal methods in the context of artificial intelligence and AI applications this book commemorates the 60th birthday of J rg H Siekmann The 30 revised reviewed papers are written by former and current students and colleagues of J rg Siekmann also included is an appraisal of the scientific career of J rg Siekmann entitled A Portrait of a Scientist Logics AI and Politics The papers are organized in four parts on logic and deduction applications of logic formal methods and security and agents and planning **Practical Aspects of Declarative Languages** Manuel Hermenegildo,Daniel Cabeza,2005-01-28 This book constitutes the refereed proceedings of the 7th International Symposium on Practical Aspects of Declarative Languages PADL 2005 held in Long Beach CA USA in January 2005 The 17 revised full papers presented together with the abstracts of 2 invited talks were carefully reviewed and selected from 36 submissions All current aspects of declarative programming are addressed including implementational issues and applications in areas such as database management active networks software engineering decision support systems and music composition *Logic Programming and Automated Reasoning* Frank Pfenning,1994-06-22 This volume presents the proceedings of the 5th International Conference on Logic Programming and Automated Reasoning held aboard the ship Marshal Koshevoi on the Dnieper near Kiev Ukraine in July 1994 The LPAR conferences are held annually in the former Soviet Union and aimed at bringing together researchers interested in LP and AR This proceedings contains the full versions of the 24 accepted papers evaluated by at least three referees ensuring a program of highest quality The papers cover all relevant aspects of LP and AR ranging from theory to implementation and application *Proceedings 1989 VLDB Conference* Petrus Maria Gerardus Apers,Gio Wiederhold,1989-12 Proceedings of the 15th International Conference see title August 1989 Amsterdam The Netherlands Contains forty five papers from worldwide contributors which explore fundamental issues and current developments parallelism interfaces statistics and programming languages **Program Development in Computational Logic** Maurice Bruynooghe,Kung-Kiu Lau,2004-06-17 1 The tenth anniversary of the LOPSTR symposium provided the incentive for this volume LOPSTR started in 1991 as a workshop on logic program synthesis and transformation but later it broadened its

scope to logic based program development in general that is program development in computational logic and hence the title of this volume The motivating force behind LOPSTR has been the belief that declarative paradigms such as logic programming are better suited to program development tasks than traditional non declarative ones such as the imperative paradigm Speci cation synthesis transformation or specialization analysis debugging and veri cation can all be given logical foundations thus providing a unifying framework for the whole development process In the past 10 years or so such a theoretical framework has indeed begun to emerge Even tools have been implemented for analysis veri cation and speci ization However itisfairtosaythatsofarthefocushaslargelybeenonprogrammi in the small So the future challenge is to apply or extend these techniques to programming in the large in order to tackle software engineering in the real world Returning to this volume our aim is to present a collection of papers that re ect signi cant research e orts over the past 10 years These papers cover the wholedevelopmentprocess speci cation synthesis analysis transformationand specialization as well as semantics and systems   **American Book Publishing Record** ,1996   *Artificial Intelligence for Advanced Problem Solving Techniques* Vlahavas, Ioannis,Vrakas, Dimitris,2008-01-31 One of the most important functions of artificial intelligence automated problem solving consists mainly of the development of software systems designed to find solutions to problems These systems utilize a search space and algorithms in order to reach a solution Artificial Intelligence for Advanced Problem Solving Techniques offers scholars and practitioners cutting edge research on algorithms and techniques such as search domain independent heuristics scheduling constraint satisfaction optimization configuration and planning and highlights the relationship between the search categories and the various ways a specific application can be modeled and solved using advanced problem solving techniques   *Information Sharing on the Semantic Web* Heiner Stuckenschmidt,Frank van Harmelen,2005 Details recent research in areas such as ontology design for information integration metadata generation and management and representation and management of distributed ontologies Provides decision support on the use of novel technologies information about potential problems and guidelines for the successful application of existing technologies
