Fundamental Principles of Mechanics

1.1 Introduction

Mechanics is a branch of physics. In general, mechanics allows one to describe and predict the conditions of rest or movement of particles and bodies subjected to the action of forces. Aristotle¹ was among the first scholars to introduce the term mechanics. At first, the development of mechanics was related to that of knowledge about the modeling of the Universe. Plato,² Eudoxus,³ and Aristotle are among the creators of the homocentric system, whereas Apollonius,⁴ Hipparchus,⁵ and Ptolemy⁶ created the epicyclic system. The theory they developed, according to which the motionless Earth is the center of the Universe, is called the geocentric theory. As was mentioned previously, Ptolemy, an Alexandrian scholar, was the originator of this theory. He based his ideas on the works of Hipparchus, one of the greatest astronomers of antiquity who explained the complexity of the motion of planets while retaining the central location of the Earth and introducing the combination of circular motions. The geocentric theory is based on the assumptions that the immovable Earth is located at the center of the Universe and that other celestial bodies shaped like spheres revolve around Earth, moving uniformly in circular orbits.

¹Aristotle (384–322 BC), Greek philosopher (Plato's student).

²Plato (428–348 BC), Greek philosopher and mathematician.

³Eudoxus of Cnidus (408–355 BC), Greek philosopher, astronomer and mathematician.

⁴Apollonius of Perga (260–190 BC), Greek mathematician and astronomer (focused on conics and the movement of the Moon).

⁵Hipparchus of Nicaea (190–120 BC), Greek astronomer, mathematician, and geographer; considered a precursor of astronomy.

⁶Claudius Ptolemaeus (100–168), Greek mathematician, astronomer, and geographer; one of the creators of the geocentric theory.
