Principles of Seed Science and Technology Lawrence O. Copeland, M. B. McDonald, 1995-10-31 Reproductive processes in plants Seed formation and development The chemistry of seeds Seed germination Seed viability testing Seed dormancy Seed vigor and vigor tests Seed longevity and deterioration Seed production Seed conditioning and handling Seed enhancements Seed certification Seed testing Seed pathology and pathological testing Seed marketing Seed legislation and law enforcement

Principles of Seed Science and Technology Lawrence O. Copeland, Miller F. McDonald, 2012-12-06 This Fourth Edition of *Principles of Seed Science and Technology* like the first three editions is written for the advanced undergraduate student or lay person who desires an introduction to the science and technology of seeds. The first nine chapters present the seed as a biological system and cover its origin, development, composition, function, and sometimes nonfunction, performance, and ultimate deterioration. The last nine chapters present the fundamentals of how seeds are produced, conditioned, evaluated, and distributed in our modern agricultural society. Two new chapters have been added in this fourth edition: one on seed ecology and the second on seed drying. Finally, revisions have been made throughout to reflect changes that have occurred in the seed industry since publication of the Third Edition. Because of the fundamental importance of seeds to both agriculture and to all of society, we have taken great care to present the science and technology of seeds with the respect and feeling this study deserves. We hope that this feeling will be communicated to our readers. Furthermore, we have attempted to present information in a straight forward, easy to read manner that will be easily understood by students and lay persons alike. Special care has been taken to address both current state of the art as well as future trends in seed technology.

Principles of Seed Science and Technology Lawrence O. Copeland, Miller F. McDonald, 2012-12-06 This Third Edition of *Principles of Seed Science and Technology* like the first two editions is written for the advanced undergraduate student or lay person who desires an introduction to the science and technology of seeds. The first eight chapters present the seed as a biological system and cover its origin, development, composition, function, and sometimes nonfunction, performance, and ultimate deterioration. The last seven chapters present the fundamentals of how seeds are produced, conditioned, evaluated, and distributed in our modern agricultural society. A new chapter on seed enhancement has been added to reflect the significant advancements made in the last 10 years on new physiological and molecular biology techniques to further enhance seed performance. Because of the fundamental importance of seeds to both agriculture and to all of society, we have taken great care to present the science and technology of seeds with the respect and feeling this study deserves. We hope that this feeling will be communicated to our readers. Furthermore, we have attempted to present information in a straight forward, easy to read manner that will be easily understood by students and lay persons.

alike Special care has been taken to address both current state of the art as well as future trends in seed technology We believe this Third Edition represents a new level in presenting information that appeals to advanced undergraduate students as well as to those desiring more fundamental information on seed form and function At the same time it continues to have the strengths of the first two editions in its readability as well as its comprehensive coverage of the broader area of seed science and technology
