DeFrank, Stephen A Smith, Tony Pedersen, Robert W Mong, George C Edwards, Jennifer Mercieca, Stacia Deshishku, 2018-03-05 The relationship between the presidency and the press has transformed seemingly overnight from one where reports and columns were filed edited and deliberated for hours before publication into a brave new world where texts tweets and sound bites race from composition to release within a matter of seconds This change which has ultimately made political journalism both more open and more difficult brings about many questions but perhaps the two most important are these Are the hard questions still being asked Are they still being answered In Columns to Characters Stephanie A Martin and top scholars and journalists offer a fresh perspective on how the evolution of technology affects the way presidents interact with the public From Bill Clinton's saxophone playing on the Arsenio Hall Show to Barack Obama's skillful use of YouTube Twitter and Reddit as the first social media president political communication appears to reflect the increasing fragmentation of the American public The

this debate In the European Union after the UsedSoft case the view is generally more favourable towards the application of the doctrine to digital goods whereas in the United States of America the view is more restrictive But what copyright needs is a harmony between the divergent views more favourably towards the views of the European Union since there have been technological advancements that do replicate the transfer of tangible goods in the digital domain The doctrine of first sale is necessary in copyright law irrespective of the method of consumption as it tends to achieve a dual purpose The first is public benefit This it achieves by allowing more people to have access to literature and art The second is economic benefit It increases the overall economic activity by creating a market for second hand goods But what should be kept in mind is that digital goods do have characteristics that make them easy to copy and distribute which increases piracy But should the answer to the problem lie in abrogating the doctrine for digital goods or in technology itself there will be a problem This is because once the doctrine has been abrogated it will be almost impossible to reintroduce it if and when technology should change and there rises a need for the doctrine But if you let the doctrine be as it is and let technology accommodate the doctrine then it is much safer

Networking Print in Shakespeare's England Blaine Greteman, 2021-08-17 In *Networking Print in Shakespeare's England* Blaine Greteman uses new analytical tools to examine early English print networks and the systemic changes that reshaped early modern literature thought and politics In early modern England printed books were a technology that connected people not only readers and writers but an increasingly expansive community of printers publishers and booksellers in new ways By pairing the methods of network analysis with newly available digital archives Greteman aims to change the way we usually talk about authorship publication and print As Greteman reveals network analysis of the nearly 500 000 books printed in England before 1800 makes it possible to speak once again of a print revolution identifying a sudden tipping point at which the early modern print network became a small world where information could spread in new and powerful ways Along with providing new insights into canonical literary figures like Milton and Shakespeare data analysis also uncovers the hidden histories of key figures in this transformation who have been virtually ignored Both a primer on the power of network analysis and a critical intervention in early modern studies the book is ultimately an extended meditation on agency and the complexity of action in context
