Green Chemistry for Surface Coatings, Inks and Adhesives Rainer Höfer, Avtar Singh Matharu, Zhanrong Zhang, 2019-06-06 Many modern surface coatings and adhesives are derived from fossil feedstocks With fossil fuels becoming more polluting and expensive to extract as supplies

dwindle industry is turning increasingly to nature mimicking natural solutions using renewable raw materials and employing new technologies Highlighting sustainable technologies and applications of renewable raw materials within the framework of green and sustainable chemistry circular economy and resource efficiency this book provides a cradle to cradle perspective From potential feedstocks to recycling reuse opportunities and the de manufacture of adhesives and solvents green chemistry principles are applied to all aspects of surface coating printing adhesive and sealant manufacture This book is ideal for students researchers and industrialists working in green sustainable chemistry industrial coatings adhesives inks and printing technologies

Monomers, Polymers and Composites from Renewable Resources Mohamed Naceur Belgacem, Alessandro Gandini, 2011-10-10 The progressive dwindling of fossil resources coupled with the drastic increase in oil prices have sparked a feverish activity in search of alternatives based on renewable resources for the production of energy Given the predominance of petroleum and carbon based chemistry for the manufacture of organic chemical commodities a similar preoccupation has recently generated numerous initiatives aimed at replacing these fossil sources with renewable counterparts In particular major efforts are being conducted in the field of polymer science and technology to prepare macromolecular materials based on renewable resources The concept of the bio refinery viz the rational exploitation of the vegetable biomass in terms of the separation of its components and their utilisation as such or after suitable chemical modifications is thus gaining momentum and considerable financial backing from both the public and private sectors This collection of chapters each one written by internationally recognised experts in the corresponding field covers in a comprehensive fashion all the major aspects related to the synthesis characterization and properties of macromolecular materials prepared using renewable resources as such or after appropriate modifications Thus monomers such as terpenes and furans oligomers like rosin and tannins and polymers ranging from cellulose to proteins and including macromolecules synthesized by microbes are discussed with the purpose of showing the extraordinary variety of materials that can be prepared from their intelligent exploitation Particular emphasis has been placed on recent advances and imminent perspectives given the incessantly growing interest that this area is experiencing in both the scientific and technological realms Discusses bio refining with explicit application to materials Replete with examples of applications of the concept of sustainable development Presents an impressive variety of novel macromolecular materials

The Printing Ink Manual C. H. Williams, 1984 **Fluoropolymer Additives** Sina Ebnesajjad, Richard Morgan, 2011-12-05 In this first book on an additive group of growing importance the authors review the commercial additives available on the market The applications chapters provide you with a step by step description of techniques to select and incorporate these additives in various products Engineers and scientists involved in polymer processing need practical information about these additives their applications and proper and safe handling Until now much of this information has been difficult to obtain because of

commercial secrecy In recent years the applications of fluoropolymer additives have expanded significantly with even the meaning of fluoropolymer additives expanding from relatively the narrow definition of PTFE powder fillers to a wide variety of fluoropolymer elastomers used as a processing aid for plastics processing such as extrusion injection molding and film blowing The benefits of fluoropolymer additives used in plastics are the elimination of sharkskin defects increases in process speed and output up to 20% the reduction of die build up the reduction of gels and optical defects etc In addition fluoropolymer additives are being increasingly used in inks lubricants and coatings For example in the coating industry fluoropolymer additives can increase the life cycle of exterior coatings due to their excellent weatherability and subsequently increase the time between recoats Fluoropolymer additives are becoming more widely used with key applications including use as a polymer processing aid increasing speed and reducing faults and as an additive to lubricants inks and coatings This book is the only practical guide available to the selection and use of fluoropolymer additives and will help readers to optimize existing fluoropolymer applications and implement new ones Fluoropolymers are known as an area where detailed information is hard to come by In this book two former DuPont employees provide a wide range of industry sectors with the essential practical information and data they need to realize the full benefits of fluoropolymer additives Written for practicing engineers Ebnesajjad and Morgan take a highly practical approach to the subject based on real world experience and case studies
