Setting Genes To Work:

Genes and the Bioimaginary Deborah Lynn Steinberg, 2016-03-03 Genes and the Bioimaginary examines the dramatic rise and contemporary cultural apotheosis of the gene. The book traces not only the genetification of modern life but is also a journey through the complex relationship between science and culture. At the heart of this book are three interlinked questions. The first concerns the paradigmatic transformations of the genetics revolution: how can we understand the impact of genes on social arenas as diverse as law and agriculture, politics and medicine, genealogy and jurisprudence? Second, how has the language of genes come to pervade public discourse as much a trope of personal narrative as of the popular imaginary? And third, how can we gain critical purchase not only on the conditions and consequences of a particular science but on its projective seductions, the terms of its persuasion and the dilemmas and anxieties provoked in its wake? Through a series of illuminating case studies ranging from gay genes to Jew genes to genes for crime from CSI to the Innocence Project from genetics post racial imaginary to its phantasies of redemption, the book examines the emergence of the gene as a pre eminent locus of both scientific and social explanation and as a powerful object of spectacle, projective phantasy and attachment. Genes and the Bioimaginary makes a distinctive contribution to our understanding of how knowledge comes to be not only powerful but plausible.

Health, Medicine and Society Michael Calnan, Jonathan Gabe, Simon J. Williams, 2002-09-11 This text brings together a range of eminent international scholars to reflect upon matters of health, medicine and society at the turn of the century.

Working Inter-Culturally in Counselling Settings Aisha Dupont-Joshua, 2003-09-02 What does it mean to work inter culturally? Our multi cultural society is changing the parameters of counselling. Working Inter Culturally in Counselling Settings explores how racial issues can be recognised and worked within a practical clinical setting. The book looks at how the counselling setting can influence practice and the book includes chapters in a range of settings including counselling training and supervision, social work, the probation service and prisons, setting up counselling services in culturally diverse communities. Aisha Dupont-Joshua together with contributors of diverse cultural heritage moves away from exclusive white models of thought and adopts more of a world view inclusive of cultural difference. Working Inter Culturally in Counselling Settings will be invaluable for counsellors, trainers, supervisors and other mental health professionals.

Genomic Signal Processing and Statistics Edward R. Dougherty, 2005 Recent advances in genomic studies have stimulated synergetic research and development in many cross disciplinary areas. Processing the vast genomic data especially the recent large scale microarray gene expression data to reveal the complex biological functionality represents enormous challenges to signal processing and statistics. This perspective naturally leads to a new field genomic signal processing GSP which studies the processing of genomic signals by integrating the theory of signal processing and statistics. Written by an international interdisciplinary team of authors, this invaluable edited volume is accessible to students just entering this emergent field and to researchers both in academia and in industry in the fields of molecular biology, engineering, statistics and signal processing. The book provides tutorial level overviews and addresses the specific needs of genomic signal processing students and researchers as a reference book. The book aims to address current genomic challenges by exploiting potential synergies between genomics, signal processing and statistics with special emphasis on signal processing and statistical tools for structural and functional understanding of genomic data. The first part of this book provides a brief history of genomic research and a background introduction from both biological and signal processing statistical perspectives so that readers can easily follow the material presented in the rest of the book. In what follows, overviews of state of the art techniques are provided. We start with a chapter on sequence analysis and follow with chapters on feature selection, classification and clustering of microarray data. We then discuss the modeling analysis and simulation of biological regulatory networks especially gene regulatory networks based on Boolean and Bayesian approaches. Visualization and compression of gene data and supercomputer implementation of genomic signal processing systems are also treated. Finally we discuss systems biology and medical applications of genomic research as well as the future trends in genomic signal processing and statistics research.
