Displaying Modal Logic Heinrich Wansing, 2013-03-14 The present monograph is a slightly revised version of my Habilitationsschrift Proof theoretic Aspects of Intensional and Non Classical Logics successfully defended at Leipzig University November 1997 It collects work on proof systems for modal and constructive logics I have done over the last few years The main concern is display logic a certain refinement of Gentzen's sequent calculus developed by Nuel D Belnap This book is far from offering a comprehensive presentation of generalized sequent systems for modal logics broadly conceived The proof theory of non classical logics is a rapidly developing field and even the generalizations of the ordinary notion of sequent listed in Chapter 1 can hardly be presented in great detail within a single volume In addition to further investigating the various approaches toward generalized Gentzen systems it is important to compare them and to discuss their relative advantages and disadvantages An initial attempt at bringing together work on different kinds of proof systems for modal logics has been made in 188 Another step in the same direction is 196 Since

Chapter 1 contains introductory considerations and moreover every remaining chapter begins with some surveying or summarizing remarks in this preface I shall only emphasize a relation to philosophy that is important to me register the sources of papers that have entered this book in some form or another and acknowledge advice and support

Hybrid Logic and its Proof-Theory Torben Braüner, 2010-11-17 This is the first book length treatment of hybrid logic and its proof theory Hybrid logic is an extension of ordinary modal logic which allows explicit reference to individual points in a model where the points represent times possible worlds states in a computer or something else This is useful for many applications for example when reasoning about time one often wants to formulate a series of statements about what happens at specific times There is little consensus about proof theory for ordinary modal logic Many modal logical proof systems lack important properties and the relationships between proof systems for different modal logics are often unclear In the present book we demonstrate that hybrid logical proof theory remedies these deficiencies by giving a spectrum of well behaved proof systems natural deduction Gentzen tableau and axiom systems for a spectrum of different hybrid logics propositional first order intensional first order and
