Make: Technology on Your Time Volume 31 Mark Frauenfelder, 2012-07-18 Why are so many kids and adults like you bored by science? Simple: you've had no real contact with it. You might read about incredibly expensive scientific projects, but your hands-on experience is probably limited to the same tired experiments like baking soda and vinegar volcanoes. Not any longer. Make Magazine's Punk Science issue, volume 31, shows you how you can become a real cutting-edge amateur scientist. Find out how high school and college students can get an introduction to modern biology research through affordable biotech labs provided by Otyp, a small Michigan-based biotechnology company. And learn how a cooperative network of schools and research groups called PEER enables students to learn science by working on real projects with people in the field, including the DECA Distributed Electronic Cosmic Ray Observatory that uses Android phones to generate a real-time cosmic ray flux map of a large area. This issue also shows you how to create these fascinating projects on your own: RoboRoach: Surgically modify a cockroach with a wireless electronic circuit so that you can control it to turn left or right by microstimulating its antenna nerves. Lord Kelvin's Thunderstorm: a little-known classic science experiment that generates high-voltage lightning sparks by dripping water through metal rings. An automatic Ball Toy Launcher for Dogs that will keep your pet entertained and exercised while you're away. A True Mirror which shows what you look like to other people. Pick up a copy of Make today and get involved with real science.
