

Making & Enjoying TELESCOPES

The background of the cover is a deep blue night sky filled with stars. A large, detailed spiral galaxy is visible in the upper right quadrant. In the lower portion of the image, the dark silhouette of a hill or mountain range is shown. Perched on the crest of one of the hills is a telescope mounted on a tripod, pointing towards the sky.

A Teacher's Guide to Using the Common

Core State Standards With Gifted and Advanced Learners in the English/Language Arts National Assoc For Gifted Children, Todd Kettler, Elizabeth Shaunessy-Dedrick, 2021-09-23 A Teacher's Guide to Using the Common Core State Standards With Gifted and Advanced Learners in the English Language Arts provides teachers and administrators a blueprint for differentiating the Common Core State Standards for English Language Arts for gifted and advanced students through the use of acceleration depth complexity and creativity within and across grade levels. It illustrates the differences between learning experiences for typical and advanced students based on the same standard and provides an array of examples across five of the information text and literary text standards while integrating the other aspects of language arts teaching and learning. The book highlights implementation features such as classroom management and assessment of student work that allow teachers to make data-based decisions about instruction for particular students. It also offers guidance to teachers on reading selections for advanced learners at all grade levels. *Building and Using Binoscopes* Norman Butler, 2017-10-03

Covering both homemade and commercial products, this book provides the reader with simple and straightforward information about the modeling, building, and use of binoscopes. Binoscopes can be thought of as binoculars enlarged to the size of telescopes; essentially, a combination of the two. Constructing a binoscope is easier than most people think, but it still demands attention to detail and proper background knowledge. The author goes on to provide additional information about the products currently on the market should the reader choose to purchase one instead of building it. Lastly, the book also compares binoscopes with telescopes in great detail, outlining the differences the reader can expect to see in the night sky from using both. The celestial views obtained with a binoscope compared to a single telescope of the same aperture are a very different experience. The new edition emphasizes the obvious advantages of viewing celestial objects through a binoscope. There are also many new photos and additional information on the latest equipment and some very special and rare equipment a collector might be interested in. Newly added cartoons and additional images of beautiful deep sky objects in each of the chapters make reading the book a more enjoyable experience. Finally, there is a new comet discovery form and guide to follow for such discoveries and a complete list of Messier objects for those interested in searching for these.
