Testing the Hierarchical Order of Reading Skills: A Multifaceted Rasch Approach Noor Lide Abu Kassim, 2024-12-11. It is well established in reading assessment that the same reading skills may vary in difficulty which makes it almost impossible to come to a definite conclusion on the hierarchy of skills. This is primarily due to the influences of test or item characteristics on the difficulty level of an item. These include the item format, context type, question type, explicitness or implicitness of information, students' test taking skills, text type and text length. Given the critical role that reading plays in literacy development and learning, this research is hoped to assist researchers and teacher practitioners in understanding what reading skills are, how they have been conceptualised and how they can be tested. It is also hoped that this book will be a reference for researchers who are interested in using the Many Facets Rasch Model and the FACETS software to investigate the hierarchical ordering of reading skills or any other language skills.

The Unusual Suspects: Linguistic Deficits in Non-Language-Dominant Neurodegenerative Diseases Adolfo M. García, Agustín Ibáñez, Bruce Miller, Maria Luisa Gorno Tempini, 2022-06-02. *Statement*, 1978. *Helping Struggling Readers* Susan Fondrk, Cheryl Frasca, 2005-09. Learn from those who have already been there, done that and know what works. Drawing on their combined 47 years of experience as Title I resource teachers, the authors provide a detailed road map for helping struggling readers become proficient.

Contemporary Perspectives on Reading and Spelling Clare Wood, Vincent Connelly, 2009-09-10. With contributions from leading international researchers, *Contemporary Perspectives on Reading and Spelling* offers a critique of current thinking on the research literature into reading, reading comprehension and writing. Each paper in this volume provides an account of empirical research that challenges aspects of accepted models and widely accepted theories about reading and spelling. This book develops the argument for a need to incorporate less widely cited research into popular accounts of written language development and disability, challenging the idea that the development of a universal theory of written language development is attainable. The arguments within the book are explored in three parts: overarching debates in reading and spelling; reading and spelling across languages; written language difficulties and approaches to teaching. Opening up the existing debates and incorporating psychological theory and the politics surrounding the teaching and learning of reading and spelling, this edited collection offers some challenging points for reflection about how the discipline of psychology as a whole approaches the study of written language skills. Highlighting ground breaking new perspectives, this book forms essential reading for all researchers and practitioners with a focus on the development of reading and spelling.
