landscape of learning for multiplication and division particularly using numbers with two and three digits Although the emphasis is on the development of mental arithmetic strategies this does not mean learners have to solve the problems in their heads but it is important for them to do the problems with their heads In other words as you use this guide encourage students to examine the numbers in each problem and think about clever efficient ways to solve it The relationships between the problems in the minilesson will support students as they progress through the string The open array is used throughout to represent student strategies To learn more visit <http://www.contextsforlearning.com>

Developing Essential Understanding of Multiplication and Division for Teaching Mathematics in Grades 3-5 Albert Dean Otto, 2011 Unpacking the ideas related to multiplication and division is a critical step in developing a deeper understanding To those without specialised training many of these ideas might appear to be easy to teach But those who teach in grades 3-5 are aware of their subtleties and

complexities This book identifies and examines two big ideas and related essential understandings for teaching multiplication and division in grades 3-5 Big Idea 1 captures the notion that multiplication is usefully defined as a scalar operation Problem situations modelled by multiplication have an element that represents the scalar and an element that represents the quantity to which the scalar applies Big Idea 2 relates to the algorithms that problem solvers have invented some of which have become standard for multiplying and dividing The authors examine the ways in which counting adding and subtracting lead to multiplication and division as well as the role that these operations play in algebraic expressions and other advanced topics The book examines challenges in teaching learning and assessment and is interspersed with questions for teachers reflection Minilessons for Early Multiplication and Division Catherine Twomey Fosnot, Harcourt School Publishers, Willem Uittenbogaard, 2007
