The field of Phytobacteriology is rapidly advancing and changing because of recent advances in genomics and molecular plant pathology but also due to the global spread of bacterial plant diseases and the emergence of new bacterial diseases. So there is a need to integrate understanding of bacterial taxonomy, genomics and basic plant pathology that reflects state of the art knowledge about plant disease mechanisms. This book describes seventy specific bacterial plant diseases and presents up to date classification of plant pathogenic bacteria. It would be of great help for scientists and researchers in conducting research on ongoing projects or formulation of new research projects. The book will also serve as a text book for advanced undergraduate and postgraduate students of disciplines of Phytobacteriology and Plant Pathology. Contains latest and updated information of plant pathogenic bacteria till December 2018. Describes seventy specific bacterial diseases. Presents classification of the bacteria and associated nomenclature based on Bergey's Manual Systematic Bacteriology and International Journal of Systematic and Evolutionary Microbiology. Discusses practical and thoroughly tested disease management strategies that would help in controlling enormous losses caused by these plant diseases. Reviews role of Type I/VI secretion systems and peptide or protein containing toxins produced by bacterial plant pathogens. Briefs about plants and plant products that act as carriers of human enteric bacterial pathogens like emphasizing role of seed sprouts as a common vehicle in causing food borne illness.
