Myocardial Ischemia From Mechanisms To Therapeutic Potentials Basic Science For The Cardiologist:

Myocardial Ischemia Dennis V. P. Cokkinos, C. Pantos, Gerd Heusch, H. Taegtmeyer, 2006-03-08 Effective new treatments of heart disease are based on a refined understanding of cellular function and the heart's response to environmental stresses. Not surprisingly therefore the field of experimental cardiology has experienced a phase of rapid exponential growth during the last decade. The acquisition of new knowledge has been so fast that textbooks of cardiology or textbooks of cardiovascular physiology are often hard pressed to keep up with the most important conceptual advances. Witness the explosive increase in knowledge about signaling pathways of cardiac growth, transcriptional regulation of cardiac metabolism, hormonal signaling and the complex responses of the heart to ischemia reperfusion or ischemic preconditioning. This book is meant to bridge the gap between original literature and textbook reviews. It brings together investigators of various backgrounds who share their expertise in the biology of myocardial ischemia. Each chapter is a self-contained mini review but it will soon become apparent to the reader that there is also a common thread. Molecular and cellular cardiology has never been more exciting than now but ever more exciting times are yet to come. The Editors ACKNOWLEDGEMENTS: Publication of this book was generously supported by Sanofi Aventis Hellas. Eikon creative team provided the technical assistance in preparing the manuscripts. Skvortsova, 2003-04-30 Highlighting concepts of brain ischemia this book looks at the molecular mechanisms of its development leading to brain tissue changes and describes strategies of neuroprotective therapy. Coverage includes cellular reactions in response to acute focal brain ischemia, microglial activation and local inflammation in focal brain ischemia, programmed cell death, primary and secondary neuroprotection, gangliosides and modern therapeutic approaches to acute focal brain ischemia. The authors are neurologists affiliated with the Russian State Medical University. Cardiac Ischemia: From Injury to Protection Bohuslav Ost'ádal, Frantisek Kolár, 2013-03-09 Cardiac Ischemia From Injury to Protection has been divided into six parts. The first part describes the differences between hypoxia and ischemia, animal models, the effects of ischemia on myocardial function and metabolism and the electrophysiological consequences of ischemia. The second part deals with the mechanisms of cardiomyocyte death in ischemia, structural aspects of irreversible ischemic injury, necrosis and apoptosis of cardiac cells, the role of calcium and the concept of calcium antagonism. The third chapter is a brief description of reperfusion injury, its clinical relevance and possible prevention. The fourth part summarizes changes in myocardial vasculature during ischemia and reperfusion. The fifth part is the survey of two main possibilities for increasing cardiac resistance to ischemia and hypoxia, i.e. long lasting adaptation to chronic hypoxia and short lasting

preconditioning The last part of the book deals with comparative and ontogenetic aspects of cardiac sensitivity to oxygen deprivation this chapter also summarizes the ontogenetic differences and limitations in endogenous and exogenous protection of the ischemic hypoxic heart Adrenergic Mechanisms in Myocardial Ischemia G. Heusch, J. Ross, 2013-04-17

Stress induced myocardial ischemia is a frequent manifestation of coronary heart disease and sympathetic activation is an important precipitating and aggravating factor in such stress induced ischemia However the complex interplay between the sympathetic initiation of myocardial ischemia ischemia induced alterations in sympathetic neurotransmission as well as changes in adrenoceptor density and post receptor signal transduction that can occur during ischemia remains incompletely understood Not only the activation of myocardial β_1 adrenoceptors but also the activation of coronary β_2 adrenoceptors can contribute to myocardial ischemia However the role of β_1 adrenoceptor mediated increases in contractility relative to heart rate in the initiation of ischemia is not clear and the significance of β_2 adrenoceptor mediated changes in coronary vasomotor tone as well as the responsible β_2 adrenoceptor subtypes are highly controversial Malignant arrhythmias may be triggered by both β_1 and β_2 adrenergic mechanisms Current research in this field is focussed not only on the underlying physiological and pathophysiological mechanisms but also on clinical treatment strategies e g by β_1 blockade β_2 blockade bradycardic agents and calcium antagonists Recent findings were presented and future research directions discussed during the 61 International Titisee Conference held at the Schwarzwald Hotel Titisee March 29 31 1990 under the sponsorship of the Boehringer Ingelheim Foundation Dr Hasso Schroeder and Dr Hermann Frohlich deserve special thanks for their generous support and pleasant organization of the meeting The publication of the proceedings has been made possible by grants from Astra Chemicals Bayer ICI Dr Karl Thomae and Upjohn **Adrenergic Mechanisms in Myocardial Ischemia** Gerd Heusch, John Ross, 1991
