Environmental Change and Security Project Report, 1998 *The Environmental Dimension of Asian Security*
In-t'aek Hyön, Miranda Alice Schreurs, 2007 Northeast Asia is a region with highly disparate levels of industrialization and

political systems It also contains some very troubling security flashpoints the Taiwan Strait the Korean Peninsula and the East China Sea China's rapacious quest for energy and rapid industrial expansion have led to intense international competition with Japan and the United States and internal instability as well North Korea poses two distinct environmental security threats famine refugees and the regime's use of nuclear blackmail for subsidized energy Yet there is very little regional cooperation despite the need to manage disputes over energy natural resources and pervasive pollution The Environmental Dimension of Asian Security examines these issues through a regional environmental security complex that explores the potential for greater intersubjective understandings of regional environmental and natural resource problems and greater institutional collaboration and management

Environment, Scarcity, and Violence Thomas F. Homer-Dixon, 2010-07-01 The Earth's human population is expected to pass eight billion by the year 2025 while rapid growth in the global economy will spur ever increasing demands for natural resources The world will consequently face growing scarcities of such vital renewable resources as cropland fresh water and forests Thomas Homer Dixon argues in this sobering book that these environmental scarcities will have profound social consequences contributing to insurrections ethnic clashes urban unrest and other forms of civil violence especially in the developing world Homer Dixon synthesizes work from a wide range of international research projects to develop a detailed model of the sources of environmental scarcity He refers to water shortages in China population growth in sub Saharan Africa and land distribution in Mexico for example to show that scarcities stem from the degradation and depletion of renewable resources the increased demand for these resources and or their unequal distribution He shows that these scarcities can lead to deepened poverty large scale migrations sharpened social cleavages and weakened institutions And he describes the kinds of violence that can result from these social effects arguing that conflicts in Chiapas Mexico and ongoing turmoil in many African and Asian countries for instance are already partly a consequence of scarcity Homer Dixon is careful to point out that the effects of environmental scarcity are indirect and act in combination with other social political and economic stresses He also acknowledges that human ingenuity can reduce the likelihood of conflict particularly in countries with efficient markets capable states and an educated populace But he argues that the violent consequences of scarcity should not be underestimated especially when about half the world's population depends directly on local renewables for their day to day well being In the next decades he writes growing

scarcities will affect billions of people with unprecedented severity and at an unparalleled scale and pace Clearly written and forcefully argued this book will become the standard work on the complex relationship between environmental scarcities and human violence **Critical Security Studies: Concepts and Cases** Keith Krause,2005 The New Security Agenda in the Asia-Pacific Region Denny Roy,2016-07-27

The field of security studies is undergoing a major re evaluation in the post Cold War era and this has important implications for the region The security dangers of the 1990s and beyond are different and more complex than those of the Cold War and strategic thinkers both in the academic and policy making spheres must begin to understand the new environment lest they fall into the old trap of planning for the next conflict based on the conditions of the last conflict This book is designed to survey the new environment assessing what has changed and what remains the same and suggesting what types of demands future strategists will face Bulk Surveillance, Democracy and Human Rights Law in Europe Marcin Rojszczak,2024-07-22 This book discusses contemporary standards of legal safeguards in the area of bulk electronic surveillance from the perspective of the European legal model Bulk or untargeted surveillance although traditionally associated with the interception of electronic communications is increasingly used as a convenient tool for collecting information on large groups of society The collection of redundant information which is intrinsic to bulk surveillance is no longer a side effect but an important objective of the use of bulk powers As a result untargeted surveillance is everywhere increasingly being implemented and without any clear link to state security or crime fighting objectives This work examines the origins of untargeted measures explores their mechanics and key concepts and defines what distinguishes them from other forms of surveillance The various elements of the legal safeguards in place which are fundamental to protecting individuals from the risks of abuse of power are analysed in detail The book discusses not only the different standards of legal safeguards but also gives examples of their implementation in individual European countries It also examines the relationship between the development of the global data market and untargeted surveillance powers in particular in the context of the risks associated with algorithmic surveillance client side scanning the privatisation of surveillance or surveillance as a service and the increasingly widespread use of preventive content filtering mechanisms The book will be a valuable resource for academics and researchers working in the areas of law international relations public policy engineering and sociology It will also appeal to professionals dealing with various aspects of the use of surveillance measures such as experts members of the legislature and law enforcement agencies Chapter 1 of this book is freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4.0 license **The Future of European Security** J. Philip Rogers,1993-06-18 Brings together a number of prominent American and European policy makers and analysts to examine the key issues involved in the new political thinking about Europe s security The overall picture is optimistic but events such as the Yugoslav civil war suggest perhaps a more dangerous future Global Climate Change, Environment and Energy Filiz Katman,2015-04-01 Global

climate change is the result of the combination of natural climate change and man made climate change that directly or indirectly damages global atmosphere components observed over a comparable time period It has both a direct and an indirect impact on the earth Despite its overwhelmingly negative connotations it also brings about opportunities such as the possibility of a green economy This book covers both sides of this debate in providing comprehensive information concerning climate change environment and energy It is composed of several articles discussing these issues from a multidimensional perspective and elaborating upon their interdependence The articles collected here are based upon contributions to the International Symposium on Global Climate Change Environment and Energy Global Challenges and Opportunities for Sustainability hosted by the Istanbul Aydin University Energy Politics and Markets Research Centre on 25 April 2011 The aim of the conference which is reflected in this volume was to fulfil the responsibility owed to the earth and to humanity
