New Humanists Science At The Edge:

The New Humanists John Brockman, 2003 Collects essays by a variety of top scientists discussing the unique contributions each of them are making to the development of modern thought in an anthology that seeks to forge links between science and the humanities

Science at the Edge John Brockman, 2008 As founder editor and publisher of the intellectual forum www.edge.org John Brockman is well positioned to initiate and cultivate an ongoing dialogue with today's leading cutting edge thinkers The website is a virtual salon for every type of intellectual and scientific pursuit from evolutionary biology and quantum physics to crowd psychology and miniaturized computing Through this vibrant and varied online community Brockman has shifted sharply away from the stereotype of the introverted out of touch scientist and introduced the reality of a fully aware and involved scientific society Science at the Edge reflects this brave new world and Brockman has assembled some of the today's most revolutionary scholars from all scientific disciplines to discuss their unique contributions to the development of modern thought Far from being a catalog of the marginal disputes of a quarrelsome scientific class this is a thrilling and intellectually stimulating discussion that serves as an introduction to some of the best minds of the 21st century This revised and updated version features additional conversations as well as a new introduction written especially for this edition The book contains Brockman's discussions many with bestselling authors on the following topics Population theory with Pulitzer Prize winning author Jared Diamond Human nature with Steven Pinker author of *The Stuff Of Thought* Technology and the human mind with Ray Kurzweil author of the controversial book *The Age of Spiritual Machines* Ways for humans to make themselves more intelligent with Marvin Minsky author of *The Emotion Machine* Evolution of mankind's violence with Richard Wrangham co author of *Demonic Males* Apes and the Origins of Human Violence Possibilities of robot life with Rodney Brooks author of *Flesh and Machines* How Robots Will Change Us Cognitive science and brain development with Marc Hauser author of *The Evolution of Communication* String theory and dimensions of space with Lisa Randall Harvard physics professor A selection of the Scientific American Book Club

The Humanist Imperative in South Africa John W. De Gruchy, 2011-08-01 This book is an outcome of the conversation that occurred during the five days of intense discussion at two symposia initiated by the New Humanism Project The struggle for a more humane society is both local and universal and increasingly these are connected in our time So while the conversation focused specifically on South Africa the discussion was neither parochial nor insular in its scope and character Hopefully then people beyond South Africa will find the contents of this book of value for them in terms of their own contexts

Science at the Edge John Brockman, 2004 Who are the cutting edge thinkers of today John Brockman argues that scientists through their research and writing are creating a third culture that recalls the Renaissance ideal of a single intellectual whole Combining this holistic awareness of the humanities and science these are the men and women shaping modern thought The result of conversations with twenty two of today's top intellectuals the book includes contributions from

Jared Diamond on population theory Steven Pinker on human nature Martin Rees on the future of the universe SCIENCE AT THE EDGE introduces us to the best scientific minds of the 21st century giving insight and debate into how best to take humanity forward

My Einstein John Brockman, 2007-08-14 In this fascinating volume today's foremost scientists discuss their own versions and visions of Einstein how he has influenced their worldviews their ideas their science and their professional and personal lives These twenty four essays are a testament to the power of scientific legacy and are essential reading for scientist and layperson alike Contributors include Roger Highfield on the Einstein myth John Archibald Wheeler on his meetings with Einstein Gino C Segrè Lee Smolin and Anton Zeilinger on Einstein's difficulties with quantum theory Leon M Lederman on the special theory of relativity Frank J Tipler on why Einstein should be seen as a scientific reactionary rather than a scientific revolutionary

Military Robots and Drones Paul J. Springer, 2013-01-09 This book provides an insightful introduction to the most important field of military innovation for the 21st century robotic and drone weaponry For centuries warring nations have sought to lower the risk to highly vulnerable humans on the battlefield typically by providing protective armor making soldiers positions more difficult to detect or by striking from locations safe from retaliation Autonomous weaponry has now reached the point where robotic systems can perform some key tasks that previously required direct human involvement *Military Robots and Drones A Reference Handbook* introduces the lay person to a highly specialized topic providing the foundation necessary for further study in this field Appropriate for high school and college level students as well as general readers with an interest in the topic the author explains the many military applications of robotics as well as current limitations and disadvantages The book also provides a general history of robotic warfare examines key individuals agencies documents and models discusses controversies within the field of robotic and drone warfare such as ethical considerations and explains how increased reliance on robotics has affected the structure and strategy of the military

Angry Public Rhetorics Celeste Michelle Condit, 2018-08-07 In *Angry Public Rhetorics* Celeste Condit explores emotions as motivators and organizers of collective action a theory that treats humans as symbol using animals to understand the patterns of leadership in global affairs to account for the way in which anger produced similar rhetorics in three ideologically diverse voices surrounding 9/11 Osama bin Laden President George W Bush and Susan Sontag These voices show that anger is more effective for producing some collective actions such as rallying supporters reifying existing worldviews motivating attack enforcing shared norms or threatening from positions of power and less effective for others like broadening thought attracting new allies adjudicating justice across cultural norms or threatening from positions of weakness Because social anger requires shared norms collectivized anger cannot serve social justice In order for anger to be a force for global justice the world's peoples must develop shared norms to direct discussion of international relations *Angry Public Rhetorics* provides guidance for such public forums

Thinking of Questions Peter Limm, 2015-09-23 This is not a conventional book It is designed to stimulate and challenge all people who are curious to find

out about the world they inhabit and their place within it It does this by suggesting questions and lines of questioning on a wide range of topics The book does not provide answers or model arguments but prompts people to create their own questions and a reading log or journal To this end almost all questions have a list of books or articles to provide a starter for stimulating further reading Once you start you will be hooked Never stop questioning *Searching for God* Charles Sears,2016-08-26 *Searching for God* is an essay sequel to *The Search for God* by the same author Its a book of quotations about God religion and philosophy taken from several different points of viewbelievers disbelievers agnostics and atheists It is the authors opinion based on personal research While the reader may agree or disagree with the points and conclusions reached it is hoped that the book will inspire new avenues of thinking about this all important subject and related subjects

The Authority of Material Vs. the Spirit Douglas D Hunter,2006-12-22 A new mathematically based structure for language allows for a new context with which one can make verifiable predictions about material life mind and the spiritual intent of creative existence **A Brain for Speech** Francisco Aboitiz,2017-07-12 This book discusses evolution of the human brain the origin of speech and language It covers past and present perspectives on the contentious issue of the acquisition of the language capacity Divided into two parts this insightful work covers several characteristics of the human brain including the language specific network the size of the human brain its lateralization of functions and interhemispheric integration in particular the phonological loop Aboitiz argues that it is the phonological loop that allowed us to increase our vocal memory capacity and to generate a shared semantic space that gave rise to modern language The second part examines the neuroanatomy of the monkey brain vocal learning birds like parrots emergent evidence of vocal learning capacities in mammals mirror neurons and the ecological and social context in which speech evolved in our early ancestors This book s interdisciplinary topic will appeal to scholars of psychology neuroscience linguistics biology and history *The Return of Collective Intelligence* Dery Dyer,2020-01-07 Reveals how we can each reconnect to collective intelligence and return our world to wholeness balance and sanity Explains how collective intelligence manifests in flocks of birds instantaneous knowing in indigenous peoples and the power of sacred places Offers ways for us to reconnect to the infinite source of wisdom that fuels collective intelligence and underscores the importance of ceremony pilgrimage and initiation Draws on recent findings in New Paradigm science traditional teachings from indigenous groups from North South and Central America and Siberia as well as sacred geometry deep ecology and expanded states of consciousness For our ancestors collective intelligence was a normal part of life We see it today as the mysterious force that enables flocks of birds swarms of bees and schools of fish to function together in perfect synchrony communicating and cooperating at some undetectable level At its most subtle it s an instantaneous knowing shared by members of a group of the wisest course of action that will benefit all As Dery Dyer reveals collective intelligence still resides within each of us and it is the key to restoring balance and harmony to our world She shows how it occurs spontaneously when individuals who share a need and

a purpose instinctively self organize into a group and function with no leader or central authority Such groups exhibit abilities much greater than what any of their members possess individually or what can be replicated with artificial intelligence Dyer explains due to an unquestioning dependence on technology modern humanity has forgotten how to connect with collective intelligence and fallen into collective stupidity otherwise known as mob mind or groupthink which is now endangering the interconnected web of life on Earth Drawing on recent findings in New Paradigm science traditional teachings from indigenous groups as well as sacred geometry deep ecology and expanded states of consciousness the author shows how the ability to think and act collectively for the highest good is hardwired in all living beings She explains how to release ourselves from enslavement by technology and use it more wisely toward the betterment of all life Underscoring the vital importance of ceremony pilgrimage and initiation she offers ways for us to reconnect to the infinite source of wisdom that fuels collective intelligence and which manifests everywhere in the natural world Revealing that once we relearn how to hear the Earth we can heal the Earth Dyer shows how each of us has a vital role to play in restoring our world to wholeness

Perspectives on Science and Culture Kris Rutten,Stefaan Blancke,Ronald Soetaert,2018-02-15 Edited by Kris Rutten Stefaan Blancke and Ronald Soetaert *Perspectives on Science and Culture* explores the intersection between scientific understanding and cultural representation from an interdisciplinary perspective Contributors to the volume analyze representations of science and scientific discourse from the perspectives of rhetorical criticism comparative cultural studies narratology educational studies discourse analysis naturalized epistemology and the cognitive sciences The main objective of the volume is to explore how particular cognitive predispositions and cultural representations both shape and distort the public debate about scientific controversies the teaching and learning of science and the development of science itself The theoretical background of the articles in the volume integrates C P Snow s concept of the two cultures science and the humanities and Jerome Bruner s confrontation between narrative and logico scientific modes of thinking i e the cognitive and the evolutionary approaches to human cognition *Television and Youth Culture* J. Jagodzinski,2009-03-26 This book explores youth in postmodern society through a Lacanian lens Jagodzinski explores the generalized paranoia that pervades the landscape of television Instead of dismissing paranoia as a negative development he claims that youth today labour within the context of paranoia to find their identities *Enlightenment Now* Steven Pinker,2019-01-15 INSTANT NEW YORK TIMES BESTSELLER A NEW YORK TIMES NOTABLE BOOK OF 2018 ONE OF THE ECONOMIST S BOOKS OF THE YEAR My new favorite book of all time Bill Gates If you think the world is coming to an end think again people are living longer healthier freer and happier lives and while our problems are formidable the solutions lie in the Enlightenment ideal of using reason and science By the author of the new book *Rationality* Is the world really falling apart Is the ideal of progress obsolete In this elegant assessment of the human condition in the third millennium cognitive scientist and public intellectual Steven Pinker urges us to step back from the gory headlines and prophecies of doom which play to our psychological biases Instead

follow the data In seventy five jaw dropping graphs Pinker shows that life health prosperity safety peace knowledge and happiness are on the rise not just in the West but worldwide This progress is not the result of some cosmic force It is a gift of the Enlightenment the conviction that reason and science can enhance human flourishing Far from being a naive hope the Enlightenment we now know has worked But more than ever it needs a vigorous defense The Enlightenment project swims against currents of human nature tribalism authoritarianism demonization magical thinking which demagogues are all too willing to exploit Many commentators committed to political religious or romantic ideologies fight a rearguard action against it The result is a corrosive fatalism and a willingness to wreck the precious institutions of liberal democracy and global cooperation With intellectual depth and literary flair Enlightenment Now makes the case for reason science and humanism the ideals we need to confront our problems and continue our progress

Julian Huxley, Evolutionism and the History of Transhumanism Ingrid Dunér, 2025-03-18 The evolutionary biologist Julian Huxley 1887 1975 attempted to promote a

religion for the future which he would come to refer to as Transhumanism Transhumanism was an attempt to unite a more traditional humanistic view of the human as containing some form of core essence or potential with an evolutionary point of view of humans as a work in progress Before humans natural selection had been responsible for the transformation of life Through its ordering principles and through chance it had given rise to humankind which had ushered in a new phase of evolution Humanity stood on the threshold of yet another critical point in evolution The consciously purposive phase of evolution This open access book explores the history of transhumanism by analyzing how Julian Huxley's transhumanism develops and why it does at this particular point in time by placing it firmly within the context of his specific scientific and sociopolitical milieu starting roughly in the interwar years and stretching over the Second World War to the 1970s

Continuing the study then focuses on the new transhumanists of the 1970s 1980s and 1990s and investigates continuity in mode of thinking contributing to a more coherent understanding of transhumanism its history and of modern projects of human enhancement The book captures how scientific and technological development in relation to society and social order shapes images and expectations of the future and of what future is desirable

The New Human in Literature Mads Rosendahl Thomsen, 2013-09-26 Twentieth century literature changed understandings of what it meant to be human Mads Rosendahl Thomsen in this historical overview presents a record of literature's changing ideas of mankind questioning the degree to which literature records and creates visions of the new human Grounded in the theory of Niklas Luhmann and drawing on canonical works Thomsen uses literary changes in the mind body and society to define the new human He begins with the modernist minds of Virginia Woolf Williams Carlos Williams and Louis Ferdinand Celine's discusses the society changing concepts envisioned by Chinua Achebe Mo Yan and Orhan Pamuk He concludes with science fiction discussing Don DeLillo and Michel Houellebecq's ideas of revolutionizing man through biotechnology This is a study about imagination aesthetics and ethics that demonstrates literature's capacity to not only imagine the future but portray the conflicting desires

between individual and various collectives better than any other media A study that heightens reflections on human evolution and posthumanism *Pointless* RW Boyer,2020-10-29 This book examines how major interpretations of quantum theory are progressing toward a more unified understanding and experience of nature It offers subtle insights to address core issues of wave particle duality the measurement problem the mind body problem determinism indeterminism free will and the nature of consciousness It draws from physics consciousness studies and ancient Vedic science to outline a new holistic interpretation of quantum theory Accessible and thought provoking it will be profoundly integrating for scholars and researchers in science and technology in philosophy and also in South Asian studies **Irreducible Mind** Edward F. Kelly,Emily Williams Kelly,Adam Crabtree,2010 Current mainstream opinion in psychology neuroscience and philosophy of mind holds that all aspects of human mind and consciousness are generated by physical processes occurring in brains Views of this sort have dominated recent scholarly publication The present volume however demonstrates empirically that this reductive materialism is not only incomplete but false The authors systematically marshal evidence for a variety of psychological phenomena that are extremely difficult and in some cases clearly impossible to account for in conventional physicalist terms Topics addressed include phenomena of extreme psychophysical influence memory psychological automatisms and secondary personality near death experiences and allied phenomena genius level creativity and mystical states of consciousness both spontaneous and drug induced The authors further show that these rogue phenomena are more readily accommodated by an alternative transmission or filter theory of mind brain relations advanced over a century ago by a largely forgotten genius F W H Myers and developed further by his friend and colleague William James This theory moreover ratifies the commonsense conception of human beings as causally effective conscious agents and is fully compatible with leading edge physics and neuroscience The book should command the attention of all open minded persons concerned with the still unsolved mysteries of the mind **Feminism, Law, and Religion** Marie Failing,Elizabeth Schiltz,Susan J. Stabile,2016-04-15 With contributions from some of the most prominent voices writing on gender law and religion today this book illuminates some of the conflicts at the intersection of feminism theology and law It examines a range of themes from the viewpoint of identifiable traditions such as Judaism Christianity Islam and Buddhism from a theoretical and practical perspective Among the themes discussed are the cross over between religious and secular values and assumptions in the search for a just jurisprudence for women the application of theological insights from religious traditions to legal issues at the core of feminist work feminist legal readings of scriptural texts on women s rights and the place that religious law has assigned to women in ecclesiastic life Feminists of faith face challenges from many sides patriarchal remnants in their own tradition dismissal of their faith commitments by secular feminists and balancing the conflicting loyalties of their lives The book will be essential reading for legal and religious academics and students working in the area of gender and law or law and religion
