Bekey, 2012-12-06 All life came from sea but all robots were born on land The vast majority of both industrial and mobile robots operate on land since the technology to allow them to operate in and under the ocean has only become available in recent years A number of complex issues due to the unstructured hazardous undersea environment makes it difficult to travel in the ocean while today's technologies allow humans to land on the moon and robots to travel to Mars Clearly the obstacles to allowing robots to operate in a saline aqueous and pressurized environment are formidable Mobile robots operating on land work under nearly constant atmospheric pressure their legs or wheels or tracks can operate on a firm footing their bearings are not subjected to moisture and corrosion they can use simple visual sensing and be observed by their creators working in simple environments In contrast consider the environment where undersea robots must operate The pressure they are subjected to can be enormous thus requiring extremely rugged designs The deep oceans range between 19 000 to 36 000 ft At a mere 33 foot depth the pressure will be twice the normal one atmosphere pressure of 29.4 psi The chemical environment of the sea is highly corrosive thus requiring the use of special materials Lubrication of moving parts in water is also difficult and may require special sealed waterproof joints Handbook of Robotic Surgery Stênio de Cássio Zequi, Hongliang Ren, 2024-10-02 Handbook of Robotic Surgery serves as a primer covering the main areas of knowledge in robotic surgery This comprehensive book provides essential information on all aspects related to robotic surgery from the present up to the future The discussion presented in sections ranges from the historical background of robotic surgery up to more recent and future technological innovations such as remote controls surgically distant collaboration simulators modern surgical robotics fluorescence guided surgery and virtual reality The book also contains sections dedicated to the safety conditions in surgery and patient protection which will be suitable for surgeons health professionals biomedical engineering
