These two volumes constitute the refereed proceedings of the First International Conference on Intelligent Robotics and Applications ICIRA 2008 held in Wuhan China in October 2008 The 265 revised full papers presented were thoroughly reviewed and selected from 552 submissions they are devoted but not limited to robot motion planning and manipulation robot control cognitive robotics rehabilitation robotics health care and artificial limb robot learning robot vision human machine interaction mobile robotics micro nano mechanical systems manufacturing automation multi axis surface machining realworld applications **Robots, Healthcare, and the Law**

Eduard Fosch-Villaronga,2019-11-04 The integration of robotic systems and artificial intelligence into healthcare settings is accelerating As these technological developments interact socially with children the elderly or the disabled they may raise concerns besides mere physical safety concerns that include data protection inappropriate use of emotions invasion of privacy autonomy suppression decrease in human interaction and cognitive safety Given the novelty of these technologies and the uncertainties surrounding the impact of care automation it is unclear how the law should respond This book investigates the legal and regulatory implications of the growing use of personal care robots for healthcare purposes It explores the interplay between various aspects of the law including safety data protection responsibility transparency autonomy and dignity and it examines different robotic and AI systems such as social therapy robots physical assistant robots

for rehabilitation and wheeled passenger carriers Highlighting specific problems and challenges in regulating complex cyber physical systems in concrete healthcare applications it critically assesses the adequacy of current industry standards and emerging regulatory initiatives for robots and AI After analyzing the potential legal and ethical issues associated with personal care robots it concludes that the primarily principle based approach of recent law and robotics studies is too abstract to be as effective as required by the personal care context Instead it recommends bridging the gap between general legal principles and their applicability in concrete robotic and AI technologies with a risk based approach using impact assessments As the first book to compile both legal and regulatory aspects of personal care robots this book will be a valuable addition to the literature on robotics artificial intelligence human robot interaction law and philosophy of technology

Humanoid Robots Matthias Hackel, 2007-06-01 In this book the variety of humanoid robotic research can be obtained This book is divided in four parts Hardware Development Components and Systems Biped Motion Walking Running and Self orientation Sensing the Environment Acquisition Data Processing and Control and Mind Organisation Learning and Interaction The first part of the book deals with remarkable hardware developments whereby complete humanoid robotic systems are as well described as partial solutions In the second part diverse results around the biped motion of humanoid robots are presented The autonomous efficient and adaptive two legged walking is one of the main challenge in humanoid robotics The two legged walking will enable humanoid robots to enter our environment without rearrangement Developments in the field of visual sensors data acquisition processing and control are to be observed in third part of the book In the fourth part some mind building and communication technologies are presented Intelligent Robotics and Applications Honghai Liu, Han Ding, Zhenhua Xiong, Xiangyang Zhu, 2010-11-18 The market demand for skills knowledge and adaptability have positioned robotics to be an important field in both engineering and science One of the most highly visible applications of robotics has been the robotic automation of many industrial tasks in factories In the future a new era will come in which we will see a greater success for robotics in non industrial environments In order to anticipate a wider deployment of intelligent and autonomous robots for tasks such as manufacturing healthcare entertainment search and rescue surveillance exploration and security missions it is essential to push the frontier of robotics into a new dimension one in which motion and intelligence play equally important roles The 2010 International Conference on Intelligent Robotics and Applications ICIRA 2010 was held in Shanghai China November 10 12 2010 The theme of the conference was Robotics Harmonizing Life a theme that reflects the ever growing interest in research development and applications in the dynamic and exciting areas of intelligent robotics These volumes of Springer's Lecture Notes in Artificial Intelligence and Lecture Notes in Computer Science contain 140 high quality papers which were selected at least for the papers in general sessions with a 62% acceptance rate Traditionally ICIRA 2010 holds a series of plenary talks and we were fortunate to have two such keynote speakers who shared their expertise with us in diverse topic areas spanning the range of intelligent robotics and application activities Understanding Robotics
