**Robots** Fredericka Berger,1992 Examines different kinds of robots what they do and how they work      **Sex Robots** Maurizio Balistreri,2022-09-19 The scientific and technological innovations that will take place over the next decade will transform our society in profound ways Sex robots or robots made for sex are already becoming a reality as a substitute for human beings in bed although current prototypes are relatively simple and crude future technological capabilities will render sex robots capable of interacting with humans in more human like ways They will be able to recognize their partner understand their state of mind and learn their tastes and preferences Professor Maurizio Balistreri introduces us to the fascinating world of sex of the future by addressing all the ethical issues that the large scale commercialization of sex robots will raise without taboos and judgements What will become of love if all our sexual relationships are conducted with machines What will happen to the world of paid sex and pornography Will sex robots increase or decrease sexual violence In addition to confronting the international debate on the moral acceptability of sex robots this book examines the most recent studies on violent video games and pornography questioning the widespread belief that playing violent games or witnessing violent representations corrupts people and makes them violent Not only could sex robots be an essential tool for expressing and exploring our most forbidden sexual fantasies but they could also be used to treat sex offenders and paedophiles Sex Robots is a book that questions our prejudices towards sex robots with clarity and simplicity helping us reason and reflect on a future that is already present in the awareness that robots will change the world and our lives      **Robots Unlimited**

**Sociable Robots and the Future of Social Relations** J. Seibt, M. Nørskov, R. Hakli, 2014-12-18 The robotics industry is growing rapidly and to a large extent the development of this market sector is due to the area of social robotics the production of robots that are designed to enter the space of human social interaction both physically and semantically Since social robots present a new type of social agent they have been aptly classified as a disruptive technology i.e. the sort of technology which affects the core of our current social practices and might lead to profound cultural and social change Due to its disruptive and innovative potential social robotics raises not only questions about utility ethics and legal aspects but calls for robo philosophy the comprehensive philosophical reflection from the perspectives of all philosophical disciplines This book presents the proceedings of the first conference in this new area Robo Philosophy 2014 Sociable Robots and the Future of Social Relations held in Aarhus Denmark in August 2014 The short papers and abstracts collected here address questions of social robotics from the perspectives of philosophy of mind social ontology ethics meta ethics political philosophy aesthetics intercultural philosophy and metaphilosophy Social robotics is still in its early stages but it is precisely now that we need to reflect its possible cultural repercussions This book is accessible to a wide readership and will be of interest to everyone involved in the development and use of social robotics applications from social roboticists to policy makers

**Research Objects in their Technological Setting** Bernadette Bensaude Vincent, Sacha Loeve, Alfred Nordmann, Astrid Schwarz, 2017-02-24 What kind of stuff is the world made of What is the nature or substance of things These are ontological questions and they are usually answered with respect to the objects of science The objects of technoscience tell a different story that concerns the power promise and potential of things not what they are but what they can be Seventeen scholars from history and philosophy of science epistemology social anthropology cultural studies and ethics each explore a research object in its technological setting ranging from carbon to cardboard from arctic ice cores to nuclear waste from wetlands to GMO seeds from fuel cells to the great Pacific garbage patch Together they offer fascinating stories and novel analytic concepts all the while opening up a space for reflecting on the specific character of technoscientific objects With their promise of sustainable innovation and a technologically transformed future these objects are highly charged with values and design expectations By clarifying their mode of existence we are learning to come to terms more generally with the furniture of the technoscientific world where for example the dead matter of classical physics is becoming the smart material of emerging and converging technologies

**Future Robots** Domenico Parisi, 2014-06-15 This book is for both robot builders and scientists who study human behaviour and human societies Scientists do not only collect empirical data but they also formulate theories to explain the data Theories of human behaviour and human societies are traditionally expressed in words but today with the advent of the computer they can also be expressed by constructing computer based artefacts If the artefacts do what human beings do the theory

blueprint that has been used to construct the artefacts explains human behaviour and human societies Since human beings are primarily bodies the artefacts must be robots and human robots must progressively reproduce all we know about human beings and their societies And although they are purely scientific tools they can have one very important practical application helping human beings to better understand the many difficult problems they face today and will face in the future and perhaps to find solutions for these problems Robo Sapiens Peter Menzel, Faith D'Aluisio, 2000 Information about
