Field and

Service Robotics Alexander Zelinsky, 2012-12-06 Joe Engelberger the pioneer of the robotics industry wrote in his 1989 book *Robotics in Service* that the inspiration to write his book came as a reaction to an industry sponsored forecast study of robot applications which predicted that in 1995 applications of robotics outside factories the traditional domain of industrial robots would amount to less than 1% of total sales Engelberger believed that this forecast was very wrong and instead predicted that the non industrial class of robot applications would become the largest class Engelbergers prediction has yet to come to pass However he did correctly foresee the growth in non traditional applications of robots Robots are now beginning to march from the factories and into field and service applications This book presents a selection of papers from the first major international conference dedicated to field and service applications of robotics This selection includes papers from the leading research laboratories in the world together with papers from companies that are building and selling new and innovative robotic technology It describes interesting aspects of robots in the field ranging from mining agriculture construction cargo handling subsea operations removal of landmines to terrestrial exploration It also covers a diverse range of service applications such as cleaning propagating plants and aiding the elderly and handicapped and gives considerable attention to the technology required to realise robust reliable and safe robots Computer-Aided Processes in Instruction and Research George C. Beakley, 1985-01-01 Computer Aided Processes in Instruction and Research focuses on the use of computers in instruction and research Topics covered include computer aided data acquisition and instruction computer aided drafting with interface for finite element mesh generation the use of microcomputers in mechanical engineering education and microcomputer aided structural analysis Computer aided learning in problem oriented courses is also discussed together with the synthesis of electronics education through introductory robotics This book is comprised of 24 chapters and begins with a discussion on the course content and the use of computer performance software by students during the design process The following chapters explore the development of microcomputer aided mechanical engineering software at Lawrence Livermore National Laboratory the data acquisition process and relevant laboratory exercises as well as the uncertainties associated with measurements involving digital systems and intelligent computer aided instruction Some of the problems that arise in the process of developing a computer aided design computer aided manufacturing computer aided engineering curriculum in a school of engineering are highlighted The final chapter features the Robotics Application Laboratory within the Engineering Technology Department of Texas A M University This monograph will be of value to students educators administrators and other professionals interested in computer assisted instruction and research
