Rock Mass Classification B. Singh, R K Goel, 1999-05-05 Rock Mass Classifications A Practical Approach in Civil Engineering was written in response to the many unanswered questions regarding this subject Questions such as Is Classification reasonably reliable Can it be successful in crisis management of geohazards Can a single Classification system be general for all rock structures Is Classification a scientific approach Laborious field research was undertaken in the Himalayan mountains by a team of scientists from the Central Mining Research Institute CMRI University of Roorkee UOR Central Soil and Material Research Station CSMRS U P Irrigation Research Institute UPIRI and Norwegian Geotechnical Institute NGI to answer these questions The results obtained from the research work were systematically compiled to produce this book which bears particular relevance to civil mining and petroleum engineers and geologists Endorsements It is a Handbook of Rock Engineering Zhao Jian School of Civil Structural Engineering Nanyang Technological University Singapore I came across your new book Rock Mass Classification absolutely fantastic Subodh K Jain U S A *Engineering Rock Mass Classification* R K Goel, Bhawani Singh, 2011-08-09 Rock mass classification methods are commonly used at the preliminary design stages of a construction project when there is very little information It forms the bases for design and estimation of the required amount and type of rock support and groundwater control measures Encompassing nearly all aspects of rock mass classifications in detail Civil Engineering Rock Mass Classification Tunnelling Foundations and Landsides provides construction engineers and managers with extensive practical knowledge which is time tested in the projects in Himalaya and other parts of the world in complex geological conditions Rock mass classification is an essential element of feasibility studies for any near surface construction project prior to any excavation or disturbances made to earth Written by an author team with over 50 years of experience in some of the most difficult mining regions of the world Civil Engineering Rock Mass Classification Tunnelling Foundations and Landsides provides construction engineers construction managers and mining engineers with the tools and methods to gather geotechnical data either from rock cuts drifts or core and process the information for subsequent analysis The goal is to use effective mapping techniques to obtain data can be used as input for any of the established rock classification systems The book covers all of the commonly used classification methods including Barton's Q and Q systems Bieniawski's RMR Laubscher's MRMR and Hoek's and GSI systems With this book in hand engineers will be able to gather geotechnical data either from rock cuts drifts or core and process the information for subsequent analysis Rich with international case studies and worked out equations the focus of the book is on the practical gathering information for purposes of analysis and design Identify the most significant parameters influencing the behaviour of a rock mass Divide a particular rock mass formulation into groups of similar behaviour rock mass classes of varying quality Provide a basis of understanding the characteristics of each rock mass class Relate the experience of rock conditions at one site to the conditions and experience encountered at others Derive quantitative data and guidelines for

engineering design Provide common basis for communication between engineers and geologists **Software for Engineering Control of Landslide and Tunnelling Hazards** Bhawani Singh,R.K.
