Propulsion Laboratory developed and launched the nation's response. Through innovation, teamwork, and tenacity, these pioneering scientists and engineers began America's exploration of space that continues to determine our place in the cosmos. JPL and the First Explorer Satellites track the development of the Russian, German, and American rocketry programs through the World Wars and into the arms race of the Cold War. Dr. Richter's memories and extensive research shed a light into the earliest days of the space age. ### **Seven Steps to a Career in Space Science and**

**Technology** Herman Jacob Peters, Samuel F. Angus, James J. Ves'sells, 1966      *Missiles, Rockets and Satellites: Earth satellites and space exploration* United States. Department of the Army, 1958      [Rockets and Space for Young Rocketeers](#)

Richard Newlands, 2017-03-06 If you want to get into Space, how do you go about it? Space is only 62 miles away, so why is it so hard to get there? The science of the forces and energies rocket scientists deal with are clearly explained with easy-to-follow diagrams. You'll find out how a rocket gets the power to overcome gravity and drag to get into Space. You'll learn how to steer and stay alive while you're up there and various ways to design a spacecraft so it gets you back safely. The many illustrations include innovative spaceships such as Virgin Galactic's SpaceshipTwo. To get you started with building and flying rockets, there is a practical step-by-step guide to launching a scale model using Estes rocket motors. Tips from experienced rocketeers will get your model rocket flying high and help you get it back in one piece. The final chapter is more challenging; it's full of in-depth rocket science where you learn how to design and test a large rocket engine capable of getting you into Space.

*Animals in Space* Colin Burgess, Chris Dubbs, 2007-07-05 Many readers will doubtless be astonished to learn that animals were being fired aloft in U.S. and Soviet research rockets in the late 1940s. In fact, most people not only believe that the Russian space dog Laika was the first canine to be launched into space but also that the high-profile precursory Mercury flights of chimps Ham and Enos were the only primate flights conducted by the United States. In fact, both countries had sent literally dozens of animals aloft for many years prior to these events and continued to do so for many years after. Other latter-day space nations such as France and China would also begin to use animals in their own space research. *Animals in Space* will explain why dogs, primates, mice, and other rodents were chosen and tested at a time when dedicated scientists from both space nations were determined to establish the survivability of human subjects on both ballistic and orbital space flights. It will also recount the way this happened, the secrecy involved, and the methods employed, and offer an objective analysis of how the role of animals as spaceflight test subjects not only evolved but subsequently changed over the years in response to a public outcry led by animal activists. It will explore the ways in which animal high-altitude and space flight research impacted on space flight biomedicine and technology and how the results, both successful and disappointing, allowed human beings to then undertake that same hazardous journey with far greater understanding and confidence. This book is intended as a detailed yet highly readable and balanced account of the history of animal space flights.

and the resultant application of hard won research to space technology and astrobiology It will undoubtedly become the ultimate authority on animal space flights      Missiles and Ventures Into Space United States. Department of the Army,1962
