Rocket and Spacecraft Propulsion Martin J. L. Turner, 2006-08-29 The revised edition of this practical hands on book discusses the range of launch vehicles in use today throughout the world and includes the very latest details of some of the advanced propulsion systems currently being developed The author covers the fundamentals of the subject from the basic principles of rocket propulsion and vehicle dynamics through the theory and practice of liquid and solid propellant motors to new and future developments The revised edition will stick to the same principle of providing a serious exposition of the principles and practice of rocket propulsion but from the point of view of the user and enquirer who is not an engineering specialist Most chapters will remain substantially the same as the first edition they will be updated where necessary and errata corrected The main revisions will be to the chapter on electric propulsion where there have been significant new developments both in engine types and in practical applications This is now seen as the key to planetary exploration by robotic probes and should therefore be reflected Nuclear propulsion has emerged from the doldrums and is now seen as a definite possibility for outer solar system robotic exploration and as enabling technology for a human mars expedition A new chapter on nuclear thermal propulsion has been added to reflect this revival of interest

The Yugas Joseph Selbie, David Steinmetz, 2011-08-16 Millions are wondering what the future holds for mankind and if we are soon due for a world changing global shift Paramhansa Yogananda author of the classic Autobiography of a Yogi and his teacher Sri Yukteswar offered key insights into this subject They presented a fascinating explanation of the rising and falling eras that our planet cycles through every 24 000 years According to their teachings we have recently passed through the low ebb in that cycle and are moving to a higher age an Energy Age that will revolutionize the world Over one hundred years ago Yukteswar predicted that we would live in a time of extraordinary change and that much that we believe to be fixed and true our entire way of looking at the world would be transformed and uplifted In The Yugas authors Joseph Selbie and David Steinmetz present substantial and intriguing evidence from the findings of historians and scientists that demonstrate the truth of Yukteswar's and Yogananda's revelations

Erasmus Darwin Desmond King-Hele,2012-07-18 It has been said of Erasmus Darwin 1731 1802 that no one from his day to ours has ever rivalled him in his achievements in such a wide range of fields He was a far sighted scientific genius fertile in theory and invention and one of the foremost physicians of his time His gift for friendship enabled him to recruit the members of the Lunar Society of Birmingham which is often seen as the main intellectual powerhouse of the Industrial Revolution in England He was especially close to Franklin Wedgwood Boulton and Watt Towards the end of his life he gained recognition as the leading English poet in the country and

he deeply influenced Blake Wordsworth Coleridge and Shelley The most striking of Darwin s many talents was his extraordinary scientific insight in physics chemistry geology meteorology and all aspects of biology his deepest insight being his evolutionary theory of life Two of his books the Zoonomia which made him famous as the leading medical mind of the 1790s and The Temple of Nature a long poem show that he believed life developed from microscopic specks in primeval seas through fishes and amphibians to humankind But he failed to convince the world about biological evolution that was left to his grandson Charles Erasmus was the first person to give a full description of how clouds form and of photosynthesis in plants He was also an obsessive inventor of mechanical devices among them a speaking machine a copying machine and the steering technique used in modern cars Substantial donations of Darwin family papers recently to the Cambridge University Library including over 170 letters written by Erasmus Darwin himself have made it possible for the author to tell much of the enthralling story of his life in Erasmus own words Desmond King Hele who is the leading authority on Erasmus Darwin having studied his life and work for three decades is a mathematician and physicist who is an expert on space research by satellite in particular on the Earth s gravity field and the upper atmosphere W F Bynum in Nature To most people who have heard of him Erasmus Darwin was a successful doctor bad poet and most significantly the grandfather of Charles Darwin In this astonishing book Desmond King Hele seeks to reverse the judgement and argue that Charles should rather be remembered as Erasmus s grandson that Erasmus was much the brighter spark a genius of rare qualities Few scientific lives have ever been so carefully and thoughtfully examined There are no final words in history but this is a biography for which the word definitive can be aptly applied Patricia Fara in Times Higher Educational Supplement Instead of being dismissed as the whimsical creator of a bizarre tale of gaudily dressed characters engrossed in various forms of polygamy he is now recognized as an influential author and an important man of science who made vital contributions to the early stages of English industrialization A moving and amply researched narrative of a man who for the author has acquired a heroic stature Choice King Hele s splendid biography of Charles Darwin s grandfather

To a Distant Day Chris Gainor,2008-01-01 Insightful instructive and definitely worth the read Greg Andres Journal of the Royal Astronomical Society of Canada As someone who has been teaching a course on space exploration for many years and has visited most of NASA s space centers I have found plenty of new and valuable material in To a Distant Day I recommend the book to all who wish to know more about the conditions people and discoveries between 1890 and 1960 that led to the space age Pangratios Papacosta Physics Today Although the dream of flying is as old as the human imagination the notion of rocketing into space may have originated with

Chinese gunpowder experiments during the Middle Ages Rockets as both weapons and entertainment are examined in this engaging history of how human beings acquired the ability to catapult themselves into space Chris Gainor's irresistible narrative introduces us to pioneers such as Konstantin Tsiolkovsky Robert Goddard and Hermann Oberth who pointed the way to the cosmos by generating the earliest wave of international enthusiasm for space exploration It shows us German engineer Wernher von Braun creating the V 2 the first large rocket which though opening the door to space failed utterly as the wonder weapon it was meant to be From there Gainor follows the space race to the Soviet Union and the United States giving us a close look at the competitive hysteria that led to Sputnik satellites space probes and finally human flight into space in 1961 As much a story of cultural ambition and personal destiny as of scientific progress and technological history To a Distant Day offers a complete and thoroughly compelling account of humanity's determined efforts sometimes poignant sometimes amazing sometimes mad to leave the earth behind *Rockets and People, Volume III, Hot Days of the Cold War*,

Red Cosmos James T. Andrews, 2009-07-24 Long before the space race captured the world's attention K E Tsiolkovskii first conceived of multi stage rockets that would later be adapted as the basis of both the U S and Soviet rocket programs Often called the grandfather of Russian rocketry this provincial scientist was even sanctioned by Stalin to give a speech from Red Square on May Day 1935 lauding the Soviet technological future while also dreaming and expounding on his own visions of conquering the cosmos Later the Khrushchev regime used him as a poster boy for Soviet excellence during its Cold War competition with the United States Ironically some revisionists have since pointed to such blatant promotion by the Communist Party in an attempt to downplay Tsiolkovskii's scientific contributions James T Andrews explores the complexities of this man to show that Tsiolkovskii was much more than either a rocket inventor or a propaganda tool He was a science popularizer novelist technical inventor and visionary whose science fiction writings included futuristic drawings of space stations long before they appeared on any engineer's drawing board Mining a myriad of Russian archives Andrews produces not only a biographical account but also a study of Soviet technological propaganda local science education public culture in the 1920s and 1930s and the cultural ramifications of space flight **Global Aeronautical Distress and Safety Systems**
