calculus on tangent spaces of Lie groups Through these examples the student develops skills in performing computational manipulations starting from vectors and matrices working through the theory of quaternions to understand rotations then transferring these skills to the computation of more abstract adjoint and coadjoint motions Lie Poisson Hamiltonian formulations momentum maps and finally dynamics with nonholonomic constraints The organisation of the first edition has been preserved in the second edition However the substance of the text has been rewritten throughout to improve the flow and to enrich the development of the material Many worked examples of adjoint and coadjoint actions of Lie groups on smooth manifolds have also been added and the enhanced coursework examples have been expanded The second edition is ideal for classroom use student projects and self study a
