legitimate knowledge and practice The discussion reconstructs the changing roles of astrology in Western science theology and culture from 1250 to 1500 The author considers both the how and the why He analyzes and integrates a broad range of sources This analysis shows that the history of astrology in particular the story of the protracted criticism and ultimate removal of astrology from the realm of legitimate knowledge and practice is crucial for fully understanding the transition from premodern Aristotelian Ptolemaic natural philosophy to modern Newtonian science This removal the author argues was neither obvious nor unproblematic Astrology was not some sort of magical nebulous hodge podge of beliefs Rather astrology emerged in the 13th century as a richly mathematical system that served to integrate astronomy and natural philosophy precisely the aim of the New Science of the 17th century As such it becomes a fundamentally important historical question to determine why this promising astrological synthesis was rejected in favor of a rather different mathematical natural philosophy and one with a very different causal structure than Aristotle's

Roger Bacon and the Defence of Christendom Amanda Power, 2013 The English Franciscan Roger Bacon c 1214-92 holds a controversial but important position in the development of modern science He has been portrayed as an isolated figure at odds with his influential order and ultimately condemned by it This major study the first in English for nearly sixty years offers a provocative new interpretation of both Bacon and his environment Amanda Power argues that his famous writings for the papal curia were the product of his critical engagement with the objectives of the Franciscan order and the reform agenda of the thirteenth century church Fearing that the apocalypse was at hand and Christians unprepared Bacon explored radical methods for defending renewing and promulgating the faith within Christendom and beyond Read in this light his work indicates the breadth of imagination possible in a time of expanding geographical and intellectual horizons

**Cultural Transfers in Dispute** Bee Yun, 2011-08-08 Our

conception of cultures and cultural change has altered dramatically in recent decades no longer do we understand cultures as isolated units rather we see them as hybrid formations constantly engaged in a multidirectional process of exchange and influence with other cultures Yet the very process by which we represent these cultural transfers is itself subject to cultural political and ideological conditions that affect our understanding acknowledgment and representation of them Built around concrete examples of controversial representations of cultural transfer from Asia the Arab world and Europe Cultural Transfers in Dispute presents a critical self reflection on the scholarly practices that underpin our attempts to study and describe other cultures

**Disenchanted Albert the Great** David J. Collins, S. J., 2024-07-15 Albert the Great 1200 1280 was a prominent Dominican friar a leading philosopher and the teacher of Thomas Aquinas He also endorsed the use of magic Controversial though that stance would have been Albert was never punished or repudiated for what he wrote Albert's reception followed instead a markedly different course leading ultimately to his canonization by the Catholic Church in 1931 But his thoughts about magic have been debated for centuries Disenchanted Albert the Great takes Albert's contested reputation as a case study for the long and complex history surrounding the concept of magic and magic's relationship to science and religion Over the centuries Albert was celebrated for his magic or it was explained away but he was never condemned In the fifteenth century members of learned circles first attempted to distance Albert from magic with the goal of exonerating him of superstition irrationality and immorality Disenchanted Albert the Great discusses the philosopher's own understanding of magic an early adulatory phase of his reputation as a magician and the three primary strategies used to exonerate Albert over the centuries In the end Disenchanted Albert the Great tells the story of a thirteenth century scholar who worked to disenchant the natural world with his ideas about magic but who himself would not be disenchanted until the modern era This accessible and insightful history will appeal to those interested in Albert the Great Catholic Church history the history of magic and Western understandings of the natural and the rational over time [The Westminster Review](#), 1863

**What Galileo Saw** Lawrence Lipking, 2014-12-18 The Scientific Revolution of the seventeenth century has often been called a decisive turning point in human history It represents for good or ill the birth of modern science and modern ways of viewing the world In What Galileo Saw Lawrence Lipking offers a new perspective on how to understand what happened then arguing that artistic imagination and creativity as much as rational thought played a critical role in creating new visions of science and in shaping stories about eye opening discoveries in cosmology natural history engineering and the life sciences When Galileo saw the face of the Moon and the moons of Jupiter Lipking writes he had to picture a cosmos that could account for them Kepler thought his geometry could open a window into the mind of God Francis Bacon's natural history envisioned an order of things that would replace the illusions of language with solid evidence and transform notions of life and death Descartes designed a hypothetical Book of Nature to explain how everything in the universe was constructed Thomas Browne reconceived the boundaries of truth and error Robert Hooke like Leonardo was both researcher and artist his schemes
