Steel-Rolling Technology Ginzburg, 1989-06-28 This state of the art volume examines steel rolling technology in a systematic and comprehensive manner providing an excellent synthesis of current information from three different branches of science physics metallurgy and engineering

High-Quality Steel Rolling Vladimir B. Ginzburg, 1993-02-23 Emphasizing solutions to the problems of achieving tight tolerances of important geometrical parameters such as thickness width cross sectional profile and flatness this reference focuses on the principles and applications of the latest technology for producing high quality flat rolled steel products Illustrated with more than 700 drawings High Quality Steel Rolling defines the geometrical parameters of flat rolled products in both conventional and standardized forms classifies the various types of transducers and sensors and provides definitions of basic metrological terms examines thickness and width control in rolling mills outlining the methods of width change by casting rolling and pressing discusses the theoretical aspects of roll deformation roll thermal expansion roll wear and roll bending in relation to strip profile and flatness reviews various control systems such as roll bending roll shifting and roll crossing as well as systems for utilizing rolls with specific profiles and flexible edge rolls analyzes the main causes of imperfections in the performance of contemporary automatic control systems and investigates new computer modeling capabilities for resolving problems in product quality

Fundamentals of Aluminium Metallurgy Roger Lumley, 2010-11-25 Aluminium is an important metal in manufacturing due to its versatile properties and the many applications of both the processed metal and its alloys in different industries Fundamentals of aluminium metallurgy provides a comprehensive overview of the production properties and processing of aluminium and its applications in manufacturing industries Part one discusses different methods of producing and casting aluminium covering areas such as casting of alloys quality issues and specific production methods such as high pressure diecasting The metallurgical properties of aluminium and its alloys are reviewed in Part two with chapters on such topics as hardening precipitation processes and solute partitioning and clustering as well as properties such as fracture resistance Finally Part three includes chapters on joining laser sintering and other methods of processing aluminium and its applications in particular areas of industry such as aerospace With its distinguished editor and team of expert contributors Fundamentals of aluminium metallurgy is a standard reference for researchers in metallurgy as well as all those involved in the manufacture and use of aluminium products Provides a comprehensive overview of the production properties and processing of aluminium and its applications in manufacturing industries Considers many issues of central importance in aluminium production and utilization considering quality issues and design for fatigue growth resistance Metallurgical

properties of aluminium and its alloys are further explored with particular reference to work hardening and applications of industrial alloys **AISE Steel Technology** ,2002 **Magnesium Technology 2015** Michele Manuel,Alok Singh,Martyn Alderman,Neale Neelameggham,2016-12-26 The Magnesium Technology Symposium the event on which this collection is based is one of the largest yearly gatherings of magnesium specialists in the world Papers represent all aspects of the field ranging from primary production to applications to recycling Moreover papers explore everything from basic research findings to industrialization Magnesium Technology 2015 covers a broad spectrum of current topics including alloys and their properties cast products and processing wrought products and processing forming joining and machining corrosion and surface finishing ecology and structural applications In addition there is coverage of new and emerging applications

Proceedings of the 2011 International Conference on Informatics, Cybernetics, and Computer Engineering (ICCE2011) November 19-20, 2011, Melbourne, Australia Liangzhong Jiang,2011-11-24 The volume includes a set of selected papers extended and revised from the International Conference on Informatics Cybernetics and Computer Engineering Intelligent control is a class of control techniques that use various AI computing approaches like neural networks Bayesian probability fuzzy logic machine learning evolutionary computation and genetic algorithms Intelligent control can be divided into the following major sub domains Neural network control Bayesian control Fuzzy logic control Neuro fuzzy control Expert Systems Genetic control Intelligent agents Cognitive Conscious control New control techniques are created continuously as new models of intelligent behavior are created and computational methods developed to support them Networks may be classified according to a wide variety of characteristics such as medium used to transport the data communications protocol used scale topology organizational scope etc ICCE 2011 Volume 1 is to provide a forum for researchers educators engineers and government officials involved in the general areas of Intelligent Control and Network Communication to disseminate their latest research results and exchange views on the future research directions of these fields 90 high quality papers are included in the volume Each paper has been peer reviewed by at least 2 program committee members and selected by the volume editor Special thanks to editors staff of association and every participants of the conference It s you make the conference a success We look forward to meeting you next year **Metals Abstracts** ,1999-04

Electrical Drive Simulation with MATLAB/Simulink Viktor Perelmuter,2024-04-26 The chapters of this book discuss the modeling of electric drives taking into account their relationship with the technological process they serve which significantly affects the composition layout and characteristics of the electric drive There are no published books of this kind and this book fills a gap in the literature This book deals with electric drives for rolling mills paper machines a number of several hoisting and transport devices these installations are very common and very complex so that modeling methods in their development and study are mandatory The book focuses on issues such as the transmission of torque by elastic shafts the transmission of torque by an endless elastic belt in paper machines and conveyors the transmission of torque by friction of

pressed rolls in the paper industry the consideration of the elastic properties of long ropes in some hoisting and transport machines and the effect of swinging a moving load in such machines More than 100 models of the electrical drives that are made with the use of the program environment MATLAB Simulink are appended to this book The aims of these models are to aid students studying electrical drives of the various manufacturing machines to facilitate the understanding of various electrical drive functions and to create a platform for the development of systems by readers in their fields This book can be used by engineers and investigators as well as undergraduate and graduate students to develop new electrical drives and investigate the existing ones
