Texas Natural History David J. Schmidly, 2002 Natural history Texas table of contents index **W. C. McKern and the Midwestern Taxonomic Method** R. Lee Lyman, Michael J. O'Brien, 2003 Explores W C McKern's use of Linnaean taxonomy as the model for development of a pottery classification system By the early 20th century North American archaeologists had found evidence of a plethora of prehistoric cultures displaying disparate geographic and chronological distributions But there were no standards or algorithms for specifying when a culture was distinct or identical to another in a nearby or distant region Will Carleton McKern of the Milwaukee Public Museum addressed this fundamental problem of cultural classification beginning in 1929 He modeled his solution known as the Midwestern Taxonomic Method on the Linnaean biological taxonomy because he wanted the ability to draw historical and cultural relationships among cultures McKern was assisted during development of the method by Carl E Guthe Thorne Deuel James B Griffin and William Ritchie This book studies the 1930s correspondence between McKern and his contemporaries as they hashed out the method's nuances It compares the several different versions of the method and examines the Linnaean biological taxonomy as it was understood and used at the time McKern adapted it to archaeological problems Finally this volume reveals how and why the method failed to provide the analytical solution envisioned by McKern and his colleagues and how it influenced the later development of Americanist archaeology **Advances in the Biology of Shrews II** Joseph F. Merritt, Sara Churchfield, R. Hutterer, Boris I. Sheftel, 2005 *Department of the Interior and Related Agencies Appropriations for 1996* United States. Congress. House. Committee on Appropriations. Do Lemmings Commit Suicide? Dennis Chitty, 1996-05-09 In 1929 a group of scientists including the author working at the Bureau of Animal Population Oxford University began the pursuit of the ecological Holy Grail a scientific endeavor devoted to the search for the secret mechanisms behind biological life cycles as they occur in many animal populations The results are presented here in an account of science not as it should be but as it really is Unlike nearly all science books which tell of successful ventures and satisfactory conclusions this book reveals the harsher story of a scientific question left unanswered Written by one of this century's most distinguished small mammal ecologists it is both a personal history of and an apology for a life in science spent on research for which no final dramatic closure was reached Included along the way are important anecdotes and history about Charles Elton and his pioneering work from which much of modern population has grown and insights on the philosophy and practice of science Whether readers have an interest in population cycles life sciences or the history and philosophy of science they will walk away with the inspiring notion that a life in science without a Nobel Prize is still well worth living *The Quintessential Naturalist* Douglas A. Kelt, 2007-07-31 Oliver P Pearson's studies on mammalian biology remain standard reading for ecologists physiologists taxonomists and biogeographers Reflecting this the papers gathered here continue to expand our understanding of the ecology and evolution of subterranean mammals and of ecology taxonomy and biogeography of Neotropical mammals a group that was central to the latter half of Pearson's career
