Putting Research to Work in Elementary Physical Education Lawrence F. Locke,Dolly Lambdin,2003 Features 30 clear summaries of studies on elementary physical education instruction class management program design workplace conditions and more Includes practical tips for navigating the typical research report to improve the ability of teachers to glean new ideas and useful facts from research Shows the differences between the vantage point of the researcher and that of the teaching practitioner and how to find the common ground between the two Covers new teaching strategies measuring instruments and program alternatives and how to think about teaching physical education in more sophisticated ways This textbook and reference provides teachers with valuable insights for using research to improve their teaching Putting Research to Work in Elementary Physical Education Conversations in the Gym lets readers eavesdrop on a career long conversation between a well known scholar and a top notch teacher who have a combined 75 years of professional physical education experience

Together they take a close look at 30 studies to help educators learn how to glean valuable information from research. The book opens a window into the minds of 69 scholars as they puzzle about teachers, students, and programs. Readers do not need a highly technical vocabulary, advanced scientific or mathematical knowledge, or a detailed background concerning research methods. The authors have provided translations in the form of brief nontechnical annotations that teachers and other nonresearchers will actually enjoy reading. Each study is briefly described and then commented on from a researcher's perspective, a teacher's perspective, and finally a shared perspective. The 30 reports address important practical issues recognizable to anyone familiar with what happens in a physical education class. The book shows how the studies can be useful to teachers in their own work and it points out how valuable information from research can be used to improve teaching. The book also demonstrates how stimulating and fruitful dialogue can be when the knowledge of researchers and practitioners is brought together around a single study. By discussing each study from both perspectives, the book sheds light on the common ground between researchers and physical educators and fosters mutual respect between the two. The varied perspectives can also provide a valuable springboard for thought-provoking discussions among colleagues in a school setting or in a graduate-level physical education course. The book presents 12 guidelines that will help readers navigate through the difficult aspects of the typical research report, plus four annotated bibliographies to help readers explore topics that are more specific and more advanced. No other resource makes such a diverse group of studies so accessible. If educators are to put research to work in their own teaching methods and program designs, there's no better place to start than with these straightforward conversations in the gym.

Early Childhood Education Petr G. Grotewell, Yanus R. Burton, 2008. This book focuses on early childhood education, which spans the human life from birth to age 8. Infants and toddlers experience life more holistically than any other age group. Social, emotional, cognitive, language, and physical lessons are not learned separately by

very young children Adults who are most helpful to young children interact in ways that understand that the child is learning from the whole experience not just that part of the experience to which the adult gives attention Although early childhood education does not have to occur in the absence of the parent or primary caregiver this term is sometimes used to denote education by someone other than these the parent or primary caregiver Both research in the field and early childhood educators view the parents as an integral part of the early childhood education process Early childhood education takes many forms depending on the theoretical and educational beliefs of the educator or parent Other terms that is often used interchangeably with early childhood education are early childhood learning early care and early education Much of the first two years of life are spent in the creation of a child s first sense of self or the building of a first identity Because this is a crucial part of children s makeup how they first see themselves how they think they should function how they expect others to function in relation to them early care must ensure that in addition to carefully selected and trained caregivers links with family home culture and home language are a central part of program policy If care becomes a substitute for rather than a support of family children may develop a less than positive sense of who they are and where they come from because of their child care experience
