Heinrichs, 2025-04-24 In an age of scientific psychiatry and evidenced based medicine the judgement of the psychiatric clinician in treating an individual patient has been devalued as the art of medicine as opposed to science with reduced evidentiary value The clinician is asked to apply the results of formal research studies of groups of patients the patient

reduced to a token of a type the latter usually defined by diagnosis Yet the limits of formal research to guide the treatment of the unique individual requires clinical judgments where there is little formal guidance while the clinician's deliberations are devalued as necessary but of questionable validity This dilemma has been encouraged by the tacit nature of the way clinicians reach decisions In this book Heinrichs makes explicit the underlying methodology of the clinical reasoning of experienced psychiatrists Starting with a detailed phenomenological examination of specific cases he argues that this methodology involves constructing models of each individual patient composed of patterns of propensities and their interaction POP models From this rational interventions can be hypothesized and predictions generated and tested The nature and characteristics of this modelling procedure is described in detail By making the model explicit clinicians can more critically assess their work Such models can also play a valuable role in educating clinical trainees This is discussed using recent work of cognitive scientists studying how expertise is developed across disciplines where considerable ambiguity and complexity exist From this specific recommendations follow for applying POP models in training settings to help turn novices into experts Finally the book challenges the devaluing of clinical judgment about individual patients by examining contemporary developments in the philosophy of science Problems with the hypothetico deductive view of science led to a naturalistic exploration of science Model construction to represent concrete pieces of reality to solve concrete problems has emerged as the fundamental process in science as practiced across all scientific disciplines POP modelling simply constitutes this process in psychiatry Hence when properly understood and rigorous applied clinical reasoning is a fully scientific process and merits high epistemological credibility

Involuntary Detention and Therapeutic Jurisprudence Kate Diesfeld, 2018-05-08

International developments within the last twenty years have demonstrated controversial shifts in treatment for people with mental illnesses and the care of persons with intellectual disabilities. These shifts have been apparent in an emphasis on deinstitutionalization, increased scrutiny of detention and discharge decisions, and in some countries, enforced treatment and care in the community. As we become increasingly conscious of the political and moral dimensions of civil commitment, these concerns are reflected in the professional literature, but this does not often enough focus on issues of clinical and legal principle, nor is it in a form which encourages comparative analysis. This collection draws on contributors from the UK, the USA, Australia, the Netherlands, Canada, and New Zealand who share a commitment to evaluating whether the civil detention processes protect the liberty, dignity, and justice interests of those with mental illnesses and intellectual disabilities. The book is written from a therapeutic jurisprudence perspective and poses a number of questions with international application, such as: Are more categories of people being detained? Is involuntary detention serving new purposes? Are different forms of detention gaining credence and being more widely utilized? And are admission decisions and review of detention decisions transparent, consistent, and just?

The authors identify systemic problems in mental health care, describe the essential factors needed for effective advocacy, and delineate the advocacy needs of diverse patient populations, e.g., children and families, older adults, LGBTQ patients, veterans.

Malpractice and Liability in Psychiatry Peter Ash, Richard L. Frierson, Susan Hatters Friedman, 2022-03-17. This book comprehensively educates psychiatrists about malpractice and other liability. It is written to also specifically assist psychiatrists who are sued or are involved in other complaints. The first two sections discuss malpractice law and the litigation process; the litigation section mainly addresses some of the more emotionally charged issues, including dos and don'ts, how an attorney will be looking at the case, the defendant doctor's testifying at deposition and trial, and the stress of being sued. The subsequent three sections address specific topics that give rise to liability, with each section taking a different perspective, such as risks in particular clinical by practice site and special issues including practice in special situations such as the current pandemic. The final section discusses other forms of liability, such as complaints to medical boards or professional association ethics committees. An exceptional work. Malpractice and

Liability in Psychiatry functions as both a go to handbook and all encompassing read on the aforementioned topics
