Making Math Learning Fun for Inner City School Students Glendolyn Duhon-Jeanlouis, Alice Duhon-Ross

McCallum, Ashraf Esmail, 2010-10-28 Making Math Learning Fun for Inner City School Students is an effective tool for educators and a textbook for professors of higher education The concepts discussed in the book provide a body of knowledge that will enable leaders to understand the critical issues surrounding inner city school students in their ability to learn mathematical concepts Research shows that three to five teachers of mathematics leave the school system within the first two years of teaching because of frustration experienced while helping inner city school students comprehend and master mathematical skills Students are often discouraged by inappropriate teaching strategies that favor learning math concepts in isolation rather than making them relevant to daily life or cultural experiences Teachers of math must clearly understand inner city school students learning styles when they are implementing a process for the student to learn Classroom teachers in the twenty first century must have valid knowledge of how the brains of inner city school children work For students to master and comprehend math skills learning activities must be both fun and relevant to their present body of knowledge about life and living

Arithmetic Counts! Paul Shoecraft, 2025-01-24 Dr Shoecraft may be the only mathematician since the New Math in the 1960s to seriously analyze the lowly subject of arithmetic and how to teach it His breakthrough came when he experimented with teaching what needs to be understood instead of known memorized like teaching why addition problems until the algorithm they are using supposedly becomes cemented in their brains By teaching the essence of arithmetic in sensible ways and appealing to children s love of games songs and movement he s proven that virtually ALL children can learn arithmetic the foundation of algebra higher mathematics science technology and more even music When children understand arithmetic they own it It s no lonver just their teacher s math It s their math America s children are being held back in math because of how arithmetic is drug out in elementary school Virtually every textbook based elementary school math program in use today is mind numbing in its repetitiveness from grade to grade The reason for the redundancy is to slow down the teaching of arithmetic so it can be memorized Research shows that the human brain is not

designed to remember things learned by rote when no longer practiced That s acknowledged in the use it or lose it aphorism that states the obvious that we remember what we use and forget what we don t You know that to be true if you ve ever forgotten things you once knew as well as your own name things like an old address or a license plate number Every child can understand base ten numeration when taught hands on with arithmetic blocks Thereby every child can understand base ten arithmetic And every child can learn how to count out the number facts like 5 7 12 17 8 9 6 X 7 42 and 56 7 8 and if they forget one never have to guess and risk ridicule and bad grades if they guess wrong What matters in teaching arithmetic is not how much a child can remember but how much they can figure out if when they forget

Noyes,2007-05-21 Why is it that so many pupils are put off by maths seeing it as uninspiring and irrelevant and that so many choose to drop it as soon as they can Why is it socially acceptable to be bad at maths Does the maths curriculum really prepare pupils for life This book presents some answers to these questions helping teachers to think through their own attitudes to teaching and learning and to work with pupils towards more effective and inspiring mathematical engagement

Part I of the book explores the nature of school mathematics showing how the curriculum has been developed over the years and how increasing effort has been devoted to improving the quality of mathematics teaching with little apparent effect Part II focuses on ways of thinking about classroom mathematics which take account of social cultural political and historical aspects The chapters bring together a collection of activities resources and discussion which will help teachers develop new ways of teaching and learning maths This book will be essential reading for all maths teachers including maths specialists on initial teacher training courses
