Making Of A Neuromorphic Visual System:

The Making of a Neuromorphic Visual System Christoph Rasche, 2005-12-06 This book presents an approach to the construction of a visual system which is behaviorally computationally and neurally motivated The goal is to characterize the process of visual categorization and to find a suitable representation format that can successfully deal with the structural variability existent within visual categories The book reviews past and existent theories of visual object and shape recognition in the fields of computer vision neuroscience and psychology The entire range of computations is discussed as are region based approaches and are modeled with wave propagating networks A completely novel shape recognition architecture is proposed that can recognize simple shapes under various degraded conditions It is discussed how such networks can be used for constructing basic level object representations It is envisioned how those networks can be implemented using the method of neuromorphic engineering

Neuromorphic Systems Leslie S. Smith, Alister Hamilton, 1998 Neuromorphic systems are implementations in silicon of sensory and neural systems whose architecture and design are based on neurobiology This growing area proffers exciting possibilities such as sensory systems that can compete with human senses and pattern recognition systems that can run in real time The area is at the intersection of neurophysiology computer science and electrical engineering This book brings together recent developments in Europe and the US so that researchers in both academia and industry can find out about the state of the art As well as elementary material on what neuromorphic systems are and why they are growing in importance the book contains details of current work There are articles on aspects of implementing sensory neuromorphic systems as well as articles on neuromorphic hardware

The Body Electric James Geary, 2002 Marie a sixty three year old Belgian woman has been totally blind since the age of fifty seven But now thanks to electrodes implanted around her right optic nerve she can see lights shapes and colors again Marie is one of a handful of people around the world who have had computer chips implanted in their bodies to extend enhance or repair their senses The idea of actually melding man and machine still seems futuristic unlikely and a little scary But in The Body Electric James Geary examines the startling possibilities opened up by the merger of the biological and the technological This remarkable convergence holds the promise of restoring sight to the blind and mobility to the paralyzed It might also provide us with bionic senses such as the ability to see infrared radiation or feel objects at a distance By linking neurons in the brain directly to silicon chips scientists are also exploring the possibility of creating virtual eyes ears and limbs on the Internet and allowing people to control appliances by thought alone Machines too are getting silicon senses Researchers are endowing computers with the ability to see hear smell taste touch and conceivably think The Body Electric offers an accessible and astute survey of this exciting area of research with its potential commercial medical and military applications Drawing on fields as diverse as artificial intelligence and biology The Body Electric asks Are you any less you after a bionic implant If all of our senses are electronically enhanced how will we tell the difference between virtual reality and the actual world Will it matter The merger of our technology and ourselves is already beginning to change the way we see hear smell taste touch and think about the world opening the doors of perception just another crack
