My World Line An Informal Autobiography:

My World Line George Gamow, 1970 This book gives a personal record of scientific adventures during the development of physics **George Gamow**, 1970 *My world line. An informal autobiography* George Gamov, 1970 **My World Line; An Informal Autobiography. Foreword by Stanislaw M. Ulam** George Gamow, 1970 *Fred Hoyle's Universe* Jane Gregory, 2005-05-26 Fred Hoyle was one of the most widely acclaimed and colourful scientists of the twentieth century a down to earth Yorkshireman who combined a brilliant scientific mind with a relish for communication and controversy Best known for his steady state theory of cosmology he described a universe with both an infinite past and an infinite future He coined the phrase big bang to describe the main competing theory and sustained a long running sometimes ill tempered and typically public debate with his scientific rivals He showed how the elements are formed by nuclear reactions inside stars and explained how we are therefore all formed from stardust He also claimed that diseases fall from the sky attacked Darwinism and branded the famous fossil of the feathered Archaeopteryx a fake Throughout his career Hoyle played a major role in the popularization of science Through his radio broadcasts and his highly successful science fiction novels he became a household name though his outspokenness and support for increasingly outlandish causes later in life at times antagonized the scientific community Jane Gregory builds up a vivid picture of Hoyle's role in the ideas the organization and the popularization of astronomy in post war Britain and provides a fascinating examination of the relationship between a maverick scientist the scientific establishment and the public Through the life of Hoyle this book chronicles the triumphs jealousies rewards and feuds of a rapidly developing scientific field in a narrative animated by a cast of colourful astronomers keeping secrets losing their tempers and building their careers here on Earth while contemplating the nature of the stars

No Truth Except in the Details A.J. Kox, D.M. Siegel, 2012-12-06 Beginning with a couple of essays dealing with the experimental and mathematical foundations of physics in the work of Henry Cavendish and Joseph Fourier the volume goes on to consider the broad areas of investigation that constituted the central foci of the development of the physics discipline in the nineteenth century electricity and magnetism including especially the work of Michael Faraday William Thomson and James Clerk Maxwell and thermodynamics and matter theory including the theoretical work and legacy of Josiah Willard Gibbs some experimental work relating to thermodynamics and kinetic theory of Heinrich Hertz and the work of Felix Seyler Hoppe on hemoglobin in the neighboring field of biophysics biochemistry Moving on to the beginning of the twentieth century a set of three articles on Albert Einstein deal with his early career and various influences on his work Finally a set of historiographical issues important for the history of physics are discussed and the chronological conclusion of the volume is an article on the Solvay Conference of 1933 For physicists interested in the history of their discipline historians and philosophers of science and graduate students in these and related disciplines **From Nuclear Transmutation to Nuclear Fission, 1932-1939** Per F Dahl, 2002-07-01 From Nuclear Transmutation to Nuclear Fission 1932 1939 deals with

a particular phase in the early history of nuclear physics the race among four laboratory teams to be the first to achieve the transmutation of atomic nuclei with artificially accelerated nuclear projectiles protons in high voltage discharge tubes This volume covers the backgro The Book of Universes John D. Barrow,2011 Barrow presents an unforgettable tour of the strange and wonderful universes that modern physics posits might just might be out there **Origins** J. E. Baggott,2015 Jim Baggott sets out the scientific story of creation 13 8 billion years from the Big Bang to human consciousness via the origins of space and time mass and light stars the habitable earth and life itself From astrophysics to biology the whole inspiring picture is here A Final Story Nasser Zakariya,2017-11-14 Towards a Final Story is the first history of the modern scientific epic These epic stories pull together our knowledge of the universe uniting material and biological origins from beginning to end The authors of these epics among them Carl Sagan E O Wilson and Steven Weinberg saw their task as providing an integrated schema that would not only bring together but also go beyond the particular scientific results and disciplines available as they wrote their histories Nasser Zakariya traces how such epic stories could achieve what they claimed how they inhabit culture and politics and how they arrived at the present moment from a period in the previous century when inquiries into ultimate origins were regarded by many as unscientific and unanswerable These prominent popular historical narratives of science are important forms of knowledge in their own right They expose what science means in the wider culture and at the same time focus attention on the near paradoxical nature of a universal history narrated by humanity for humanity
