Oliver,1826 **Berkeley's Doctrine of Signs** Manuel Fasko,Peter West,2024-04-22 This volume focuses on Berkeley's doctrine of signs The doctrine of signs refers to the use that Berkeley makes of a phenomenon that is central to a great deal of everyday discourse one whereby certain perceivable entities are made to stand in for as signs of something else Things signified might be other perceivable entities or they might also be unperceivable notions such as the meanings of words From his earliest published work A New Theory of Vision in 1710 to those works written towards the end of life including Alciphron in 1732 Berkeley is at pains to emphasise the crucial role that sign usage particularly but not only in language plays in human life Berkeley also connects sign usage to our human relationship with God an issue that was right of the heart of his philosophical project The contributions in this volume explore the myriad ways that Berkeley built on such insights to better understand a range of philosophical issues issues of epistemology language perception mental representation mathematics science and theology The aim of this volume is to establish that the doctrine of signs can be seen as one of the unifying themes of Berkeley's philosophy What's more this theme is one which spans his whole philosophical corpus not just his best known works like the Principles and the Three Dialogues but also his works on science mathematics and theology
