The practice of clinical neurophysiology – 2019 and beyond

The International Federation of Clinical Neurophysiology (IFCN) was inaugurated as the International Federation of Societies of Electroencephalography and Clinical Neurophysiology (IFSECN) in 1949, and this means that **2019 is our 70th anniversary**. There has been remarkable growth of the specialty and of the Federation over those 70 years. From a diagnostic specialty, clinical neurophysiology has grown to come an essential enabling science for measuring, monitoring and even treating neurological disorders, important in all major fields of modern neuro-care: neurology, neurosurgery, psychiatry, neuropaediatrics, neuro-ICU, neuroradiology, neurorehabilitation, to name just a few.

The history of the Federation is detailed in the book *Wave Length and Action Potentials: History of the International Federation of Clinical Neurophysiology* (by Marc R. Nuwer and Carl-Herman Lücking), freely available in full on the IFCN webpage <http://www.ifcn.info/about-us/history/>.

The Federation grew out of a scientific meeting, now recognised as the first International Congress of the specialty, held at the National Hospital for Nervous Diseases, Queen Square, London in 1947, and attended by approximately 100 participants from 17 countries, most from Britain. This meeting laid the groundwork for the formation of an International Federation and the publication of a journal, which came to be known as *Electroencephalography and Clinical Neurophysiology* [“The EEG Journal”], with Herbert H. Jasper of the Montreal Neurological Institute as its first Editor. The second international meeting was held in Paris in 1949, and the third in Montreal in 1953.

Henri Gastaut drafted the constitution of the International Federation (Fédération Internationale d'Electroencephalographie et de Neurophysiologie Clinique), and became the first Secretary, with Jasper as the first President, the other Officers being Honorary President: 1932 Nobel Prize winner Edgar D. Adrian (UK; Lord Adrian, 1955), Vice-Presidents: Robert S. Schwab (USA), W. Grey Walter (UK) and Fritz Buchthal (Denmark), and Treasurer: Antoine Rémond (France). We owe a great debt to our founding fathers.

To quote from *Wavelength and Action Potentials*, “the third item on the first morning's program [at the 1947 First Congress] was a discussion on the “Formation of a World EEG Organization and the Foundation of an International Journal”, opened by W.T. Liberson of Hartford, CT, USA. Speaking of the proposed journal he said it: should not be concerned exclusively with electroencephalography, but be devoted to all the problems of experimental and clinical neurophysiology... many of us do not commit ourselves to the problems of the electrical activity of the brain alone, but carry on research in the fields of electromyography, electrodermography and electrodiagnosis of peripheral nervous diseases.” It is pleasing to see that, though warmly debated over many years, this sage advice was ultimately accepted by the international community.

The International Federation has always been a federation of societies, without individual membership, and it has grown to embrace national societies from 62 countries. It has a mission “to promote best practice in clinical neurophysiology through education and research throughout the world”, and its vision is “to improve healthcare worldwide by understanding the nervous system and optimising the diagnosis and treatment of its disorders through clinical neurophysiology”. Organisationally the Federation has four “Chapters”, Europe, Middle East and Africa (36 societies), Asia-Oceania (12 societies), Latin America (12 societies) and North America (3 societies), all with a mission to promote research and education in the specialty, to hold Congresses and to grow the specialty in their regions.

As part of that mission, the Federation began a second journal in 2016. I have had the privilege of being the inaugural Editor-in-Chief, joined in this role by Associate Editors Josep Vallis-Sole and Susan T. Herman who stood down once we were successfully up and running, to be replaced by Margitta Seecik. In an Editorial in the first issue, we wrote: “The **rationale** behind the International Federation of Clinical Neurophysiology (IFCN) joining with Elsevier to create a new journal that can focus on education and clinical practice is that submissions on these important goals of the IFCN are becoming difficult to publish in *Clinical Neurophysiology*. This is largely because of the success of that journal: as its international standing has risen, so too have the number of submissions it attracts, and the number of papers that can be accepted has steadily decreased. *Clinical Neurophysiology Practice* has a different rationale to the more research-orientated journal, *Clinical Neurophysiology*, and will provide a publication avenue for clinicians and clinical researchers who are at risk of being disenfranchised by the increasing success of *Clinical Neurophysiology*. Accordingly it is intended that the two journals will complement one another, work closely together, and share the same platforms with Elsevier...” (Burke et al., 2016).

Under **types of papers**: “While “novelty” is an important criterion for a research-orientated journal, clinical practice requires that techniques can be verified, and findings need to be replicated before they are introduced into clinical care. In establishing clinical “best practice”, *Clinical Neurophysiology Practice* will welcome scientifically sound papers that may not be “novel” but which establish the value of a procedure. Methodological and technical reports and studies reporting normative data on healthy subjects are welcome, provided that they represent an advance on current knowledge and particularly if they are likely to change clinical practice. Reports on cases that have been worked up well can be educationally instructive, and this journal welcomes them, without the space and figure limitations that apply to *Clinical Neurophysiology*. Indeed inadequate illustration of neurophysiological findings limits the educational value of the case and is likely to be a barrier to acceptance...” (Burke et al., 2016).

Recommendations For The Practice Of Clinical Neurophysiology:

Recommendations for the Practice of Clinical Neurophysiology International Federation of Clinical Neurophysiology, 1999 This volume is a state of the art summary of all the established techniques of clinical neurophysiology. It covers all the technical aspects and the relevant information for the application of these techniques in a clinical setting. An excellent book, there is no other comparable work available on the market. The authors are top scientists representing their respective fields in the international scientific community. Included are lucid reports on technical standards and applications of electromyography, evoked potentials, motor evoked potentials, reflex tests, and tests of autonomic functions in clinical neurophysiology and electrooculography. Setting the standards for the clinical routine and applications in neurology, psychiatry, and child neurology, it should have a place on the bookshelves of physicians and technicians in clinical neurophysiology.

Neurophysiological Monitoring During Intensive Care and Surgery N. Jollyon Smith, Mark van Gils, Pamela Prior, 2006 This title enables readers to understand how to undertake appropriate neurophysiological investigations in the critical care setting. The book addresses the scientific principles, biological and technological recording techniques, the development of electrical potentials in normal subjects, and the ways these are disturbed by trauma, surgery, and disease. The impact of digital technologies and the possibilities of quantification, statistical treatment, and advanced signal processing techniques have enabled practitioners to work to more rigorous scientific standards. The increasing availability of such tools in daily clinical work means that patients can now benefit from investigations of known specificity and sensitivity.
