Stanovich, 2010-10-15 The idea that we might be robots is no longer the stuff of science fiction decades of research in evolutionary biology and cognitive science have led many esteemed scientists to the conclusion that according to the precepts of universal Darwinism humans are merely the hosts for two replicators genes and memes that have no interest in us except as conduits for replication Richard Dawkins for example jolted us into realizing that we are just survival mechanisms for our own genes sophisticated robots in service of huge colonies of replicators to whom concepts of rationality intelligence agency and even the human soul are irrelevant Accepting and now forcefully responding to this decentering and disturbing idea Keith Stanovich here provides the tools for the robot's rebellion a program of cognitive reform necessary to advance human interests over the limited interest of the replicators and define our own autonomous goals as individual human beings He shows how concepts of rational thinking from cognitive science interact with the logic of evolution to create opportunities for humans to structure their behavior to serve their own ends These evaluative activities of the brain he argues fulfill the need that we have to ascribe significance to human life We may well be robots but we are the only robots who have discovered that fact Only by recognizing ourselves as such argues Stanovich can we begin to construct a concept of self based on what is truly singular about humans that they gain control of their lives in a way unique among life forms on Earth through rational self determination      *The Robot Revolution* Tom Logsdon, 2000-12 In a factory on the slopes of Mount Fuji industrial robots are now making more robots working flawlessly around the clock with virtually no human supervision In Beverly Hills a robot which normally serves drinks at parties is arrested for handing out business cards illegally in a busy downtown street From forbidding lunar landscapes to mineral rich ocean floors robots perform tasks we thought only humans could do or could not be done at all In *The Robot Revolution* noted author and computer engineer Tom Logsdon reveals the fact is stranger than fiction world of robots and the impact they are having in all facets of society from industry and defense to sports and entertainment He explores their history from the legendary creations of the ancient Greeks to the experimental ultra sensitive machines of today And he explains just what robot is and why the latest advances in such fascinating fields as artificial intelligence are making real robots more and more similar to R2D2 and C3PO Ready or not *The Robot Revolution* is here and our lives are never going to be the same again      *Steel Defender: A Post Apocalyptic Robot Science Fiction Novel (Rusted Wasteland Book 2)* Cameron Coral, 2023-08-25 Continue the heartwarming robot sci fi series by award nominated author Cameron Coral A timid robot will risk everything to protect his favorite human in a post apocalyptic world Block the CleanerBot who risked it all to safeguard a baby girl across the war torn wastelands thinks he's finally found a safe haven for Wally But the humans he's entrusted with her care won't let him visit her leaving him to follow his cleaning routines and miss

*Personhood and Social Robotics* Raya A Jones,2015-12-14 An exponentially growing industry human robot interaction HRI research has drawn predominantly upon psychologists descriptions of mechanisms of face to face dyadic interactions

This book considers how social robotics is beginning unwittingly to confront an impasse that has been a perennial dilemma for psychology associated with the historical science vs art debate. Raya Jones examines these paradigmatic tensions and in tandem considers ways in which the technology centred discourse both reflects and impacts upon understanding our relational nature. Chapters in the book explore not only how the technology centred discourse constructs machines as us but also how humans feature in this discourse. Focusing on how the social interaction is conceptualised when the human robot interaction is discussed, this book addresses issues such as the long term impact on persons and society, authenticity of relationships and challenges to notions of personhood. By leaving aside terminological issues, Jones attempts to transcend ritual of pitching theories against each other in order to comprehensively analyse terms such as subjectivity, self and personhood and their fluid interplay in the world that we inhabit. *Personhood and Social Robotics* will be a key text for postgraduate students, researchers and scholars interested in the connection between technology and human psychology, including psychologists, science and technology studies scholars, media studies scholars and humanists. The book will also be of interest to roboticists and HRI researchers as well as those studying or working in areas of artificial intelligence and interactive technologies more generally.

Non-monotonic and spatiotemporal reasoning, knowledge acquisition, verification, non-monotonic and spatiotemporal thinking, knowledge acquisition, verification, validation and maintenance challenges the realization of cognition on machines and the design of AI machines are among the topics of AI research that are discussed in the book. The two case studies that conclude the book, one on criminal investigation of expert systems and the other on navigational planning of robots, focus mostly on the implementation of intelligent systems through the use of the techniques discussed in the book.
