Robotics and Factories of the Future '87 R. Radharamanan, 2012-12-06 The papers presented at the Second International Conference on Robotics and Factories of the Future held in San Diego California USA during July 28 31 1987 are compiled in this volume Over two

hundred participants attended the conference made technical presentations and discussed about various aspects of manufacturing robotics and factories of the future The number of papers published in this volume and the number of unpublished presentations at the conference indicates the evidence of growing interest in the areas of CAD CAM robotics and their role in future factories The conference consisted of five plenary sessions twenty three technical sessions workshops and exhibits from local industries and educational institutions I wish to acknowledge with many thanks the contributions of all the authors who presented their work at the conference and submitted the manuscripts for publication It is also my pleasure to acknowledge the role of keynote banquet and plenary sessions speakers whose contributions added greatly to the success of the conference My sincere thanks to all session chairmen I wish that the series of the International Conferences on Robotics and Factories of the Future which was initiated in 1984 in Charlotte North Carolina will have a major impact on the use of robots and computers in the automated factories of the future

1990 Goddard Conference on Space Applications of Artificial Intelligence James L. Rash,1990 *CAD/CAM Robotics and Factories of the Future* Birendra Prasad,2012-12-06

This volume is about automation automation in design automation in manufacturing and automation in production Automation is essential for increased productivity of quality products at reduced costs That even partial or piecemeal automation of a production facility can deliver dramatic improvements in productivity has been amply demonstrated in many a real life situation Hence currently great efforts are being devoted to research and development of general as well special methodologies of and tools for automation This volume reports on some of these methodologies and tools In general terms methodologies for automation can be divided into two groups There are situations where a process whether open loop or closed loop is fairly clearly understood In such a situation it is possible to create a mathematical model and to prescribe a mathematical procedure to optimize the output If such mathematical models and procedures are computationally tractable we call the corresponding automation algorithmic or parametric programming There is however a second set of situations which include processes that are not well understood and the available mathematical models are only approximate and discrete While there are others for which mathematical procedures are so complex and disjoint that they are computationally intractable These are the situations for which heuristics are quite suitable for automation We choose to call such automation knowledge based automation or heuristic programming

Microprocessors in Robotic and Manufacturing Systems S.G. Tzafestas,2012-12-06

Microprocessors play a dominant role in computer technology and have contributed uniquely in the development of many new concepts and design techniques for modern industrial systems This contribution is excessively high in the area of robotic and manufacturing systems However it is the editor's feeling that a reference book describing this contribution in a cohesive way and covering the major hardware and software issues is lacking The purpose of this book is exactly to fill in this gap through the collection and presentation of the experience of a number of experts and professionals working in different academic and industrial environments The book is divided in three parts Part 1 involves the first four

chapters and deals with the utilization of microprocessors and digital signal processors DSPs for the computation of robot dynamics The emphasis here is on parallel computation with particular problems attacked being task granularity task allocation scheduling and communication issues Chapter 1 by Zheng and Hemami is concerned with the real time multiprocessor computation of torques in robot control systems via the Newton Euler equations This reduces substantially the height of the evaluation tree which leads to more effective parallel processing Chapter 2 by D Hollander examines thoroughly the automatic scheduling of the Newton Euler inverse dynamic equations The automatic program decomposition and scheduling techniques developed are embedded in a tool used to generate multiprocessor schedules from a high level language program
